# Clothing Pro Moth Traps

Enhanced Formula

### Description

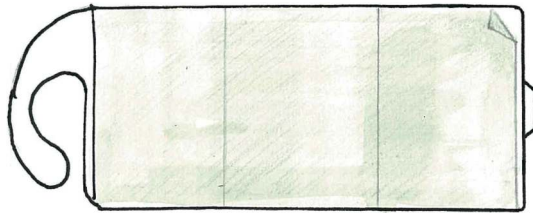

Clothing Pro Moth box comes in pack of 6 traps, easy to use and set up. Our Clothing Pro Moth Traps aim to bring an end to reproduction of the most common moths such as common clothes moths and case bearing clothes moth. Our traps are made of biodegradable materials with enhanced nontoxic pheromone formula.

### Clothing Moth Types

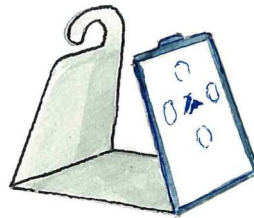

**Common Clothes Moth :** Also known as the webbing clothes moth. The size of the common clothes moth is between 0.4-0.78 inches long. They have a golden and brownish colour. They like to hide and lay their eggs in dark places such as your wardrobe. Their eggs are at most 0.04 inches long. Common clothes moth is sneakier and prefers to crawl rather than flying.

**Case Bearing Clothes Moth :** They are the same size as the common clothes moth. Their difference is in the colour as they are darker. They do the same damage as their sibling but more visible to the eye as they prefer to fly

**1. Peel off the protective film**

**2. Fold along creases**

**3. Fasten the trap**

**4. Place the trap**

### When to use

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

## ALPHA MATRIX

**How to use :** A single trap by itself may not be as effective. Therefore, we have developed the ultimate method called an “ALPHA Matrix” to get the most efficient outcome from our traps. 2 traps are placed in a perpendicular formation where one trap can be on the clothing rail and the other at a lower point in your wardrobe/closet. ALPHA Matrix method will accelerate the process and efficiency of our traps. Traps can be replaced after 3 months or when fully occupied.

**Non-Toxic** – Pantry Pro Trap does not contain any toxic chemicals. Pesticide-free adhesive trap that is safe for use indoors and ultimate solution for pantry pests.

**Bio-degradable** – Our traps are environmentally friendly and made out of bio-degradable materials.

**Odorless** – Our traps do not have any odor or smell and can be used pleasantly in any room.

### CAUTION

- Keep out of the reach of children.
- Our traps are safe for pets. However, some pets are curious and would check our awesome traps out. It is recommended to place traps out of their reach to avoid getting their paws or noses sticky by the glue. If you own a cat, it is better to place traps higher, as they like to jump on unknown objects. If you own a dog, you can have the freedom to place traps at a lower height. If you own a tiger or a monkey, good luck.
- If somehow not your pets but you manage to get in contact with the glue, do not worry, gently wash your hands with vegetable oil and soap. The glue is harmless and non-toxic.

### NOTICE

If used not in accordance with directions stated on product description, buyer assumes all responsibility for safety and use to the extent consistent with applicable law.

## FAQ

### 1. How do I know if I have a pantry or clothing moth infestation?

It is quite simple to identify between pantry or clothing moths.

Clothing moths usually infest your clothes and fabrics that mostly have animal fibers. Naturally, clothing moths are found in dark areas of your wardrobes or closet. They are known to be good crawlers and jumpers rather than flying. They feed on wool, silk, feathers, leather and fur.

Pantry moths are mostly found in the kitchen or in rooms close to your kitchen that may also have dry goods storage. Pantry moths come into the house through dry foods that are already infested with adult moths or their larvae. Larvae feed on dry foods including grains, dried fruits, cereals, nuts, processed food and groceries.

### 3. How long do traps last?

If opened, our traps last up to 3 months or until they are fully occupied.  
If unopened, our traps can last up to 3 years from the date of manufacture which can be found outside on the sealed aluminium package of the trap itself.

### 5. Do Catcher Labs. have guarantee on products and return policy?

Yes. Catcher Labs. is customer oriented. If you are unsatisfied with our products, or happen to get a broken/deformed product, you can contact us for a replacement or full refund.

### 2. I have placed the traps but seems to be not catching any moths?

Make sure that you have followed the how-to instructions accurately. Protective layer must be removed from the glue.

Our Alpha matrix solution has been tested and proven to be the ultimate catching mechanism. However, to make sure, it is recommended to change the place of traps time to time. And if one trap in the alpha matrix catches more, it is recommended to bring other two traps closer to that one. If you do not have enough traps to form a alpha matrix, then you can try to place in different formations with a minimum of two traps. If you have only one trap left, it is recommended to try multiple places until the sweet spot is found.

### 4. What to do before placing traps? For clothing – to get it cleaned etc.

It is recommended to get your clothes and fabrics dry cleaned or at least washed before placing the traps.
