Create the look of freshly fallen snow for your favorite holiday decorations! This project is easily adjustable to suit your needs by calculating the number of stitches needed to cast on as follows:

- Measure how large you would like the piece to be (example: 12" [30.5 cm] wide).
- The gauge of Bernat ${ }^{\circledR}$ Pipsqueak ${ }^{T M}$ (with registration and TM) Pipsqueak ${ }^{\text {TM }}$ is 10 stitches per $4^{\prime \prime}$ [10 cm]. This means there are 2.5 stitches per inch. Calculate your cast on stitches by multiplying the width you require x 2.5. Example: $12 \times 2.5=30$.

Therefore, you would need to cast on 30 stitches to make a blanket of snow 12" [30.5 cm] wide. Knit to your desired length and cast off.
