

Quilter™

Performance Amplification

FRONTLINER 2x8W

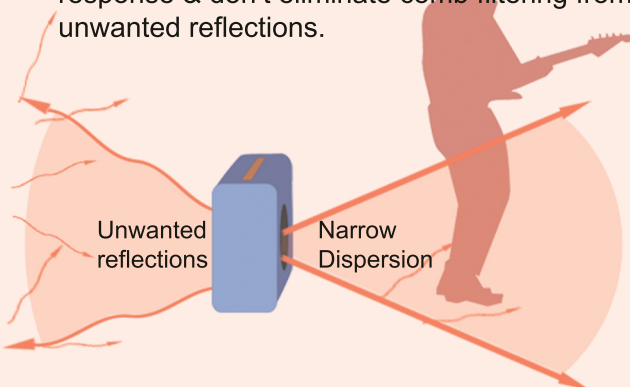

Introducing the most advanced guitar amplification system available for the guitarist of today. The Frontliner 2x8W allows you to mount any Quilter "Block" style amplifier in the rear mounted docking bay, turning it into a powerful grab and go 200 watt combo. Pick it up with one hand, walk onstage and easily outperform cumbersome 4x12 rigs!

- CNC milled footcups to precisely locate amplifier in docking bay
- Quick release thumbscrews let you detach your head for fly dates
- Brushed, black anodized, aluminum plate securely retains amplifier
- High grade, ultra-light plywood for minimum weight
- Dual 8" concert grade drivers
- Heavy duty input jack and speaker wiring with strain relief terminations
- Chrome plated, rubber cushioned steel reinforced handle
- 130° dispersion with 20° speaker tilt delivers wide, clear coverage
- T-5052 aircraft grade anodized aluminum alloy grill
- Ballistic nylon cover (included) protects your investment
- Accepts Quilter 101 Series, or Quilter "Block" style amplifiers

Traditional bulky guitar combos have narrow dispersion patterns and cranking them up leaves the audience in pain and the sound man angry. Tilt back legs or stands help but kill bass response & don't eliminate comb filtering from unwanted reflections.

The Frontliner 2x8W's 20 degree speaker angle and ultra wide dispersion aim your tone where you need it instead of blasting the front row. The closed back cuts down on unwanted reflections making your sound more controlled and focused.
