

# Vault Door Pallet Removal Instructions

**Goal:** To prevent injury and unintentional damage to the product.

**Tools Required:** Powered drill with Phillips bit for removing screws. A pry bar and small hammer for removing nails and boards.

- 1.** Remove all Phillips screws used to secure top crate board.
  
- 2.** Using the nail bar and hammer remove all side plywood boards and 2x4's.
  
- 3.** With the help of 2 additional people you are now ready to remove the door from the pallet.

**\*\*\* IMPORTANT:** Make sure the area is level and there are no obstacles around the door prior to attempting removal from the pallet.

- a.** With a person on each side and one at the top slightly lift the door and move it down so the bottom of the door is hanging over the pallet about 1ft.
  
- b.** To lift the door off the pallet, place 1 person on each side near the top and 1 person at the top and start to lift the door to the upright position.
  
- c.** While 2 people are holding each side of the door have the 3<sup>rd</sup> person remove the pallet and discard it.
  
- d.** Please follow the instructions for installation.
