Supplied with TOUGHENED GLASS, POLYESTER ROOFING FELT & TANALISED FLOOR JOISTS AS STANDARD

excludes the popular range

Garden Buildings Ltd

Welcome to Regency Garden Buildings

We are a family run business who have been manufacturing quality garden buildings for over 40 years and have a very experienced workforce and a network of agencies throughout the United Kingdom.

We would like your building to be a useful addition to your garden whether it's;

A Garden Room/Office this would be a useful addition to any garden and is useable all the year round...

A Summer House to enhance your garden area

A Gazebo to sit and relax in or to enjoy your hot tub

A Utility Building/Potting Shed for the keen gardener or DIY enthusiast

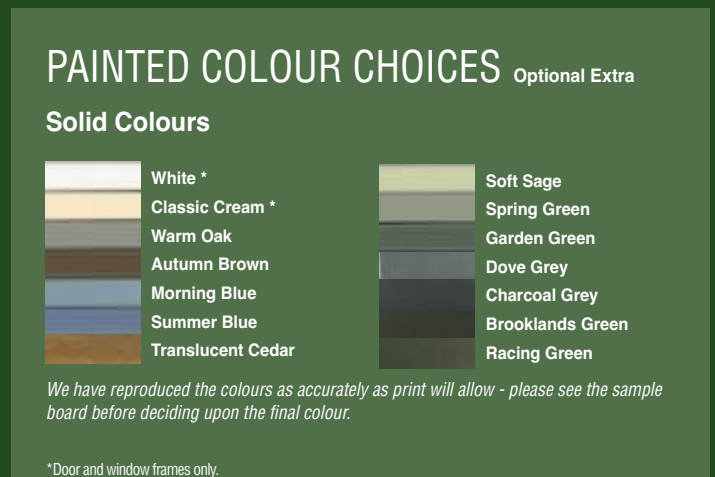

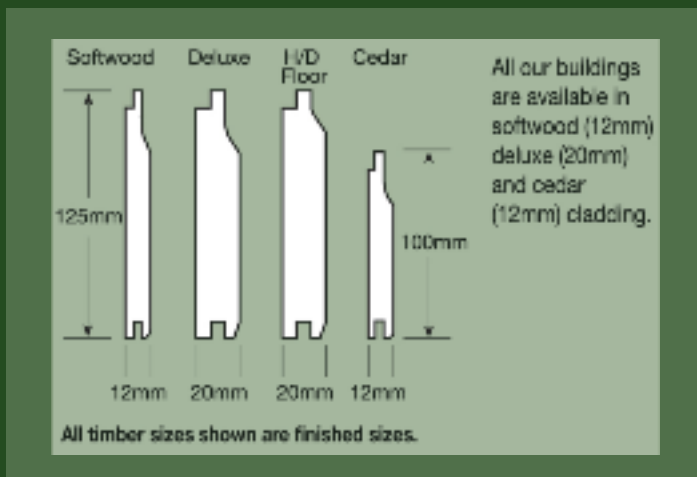

A Play House for the children to use their imagination in

We have a range to suit everyone's needs and budget we also offer a bespoke service for that space in your garden that a standard building just won't fit into. Most of our buildings can be Lined and Insulated so your building could indeed be used for 12 months of the year.

We have numerous options, including a choice of glazing, Modern, Georgian, $\frac{3}{4}$ Length, Leaded and Standard (*excludes the Popular Apex and Pent*) along with lining, insulation, painting a choice of cladding, felt tiles, cedar roof and cedar shingles.

Our buildings are all supplied with toughened glass (*excludes the Popular Apex and Pent*) polyester roofing felt and tanalised floor joists as standard, we do not use any form of chipboard or plywood in any of our buildings

See below for our choice of paint colours and different cladding options.

All of the timber used to construct our buildings is sourced from countries that operate a well managed sustainable forest programme.

Standard features

Georgian toughened double glazed storm windows and doors, 4 top opening windows, 50x50mm framing, 50x50mm tanalised floor joists, fully rebated doors and frame, mortice lock and lever handle, polyester roofing felt, hurl window hinges, heavy duty door hinges and modern style chrome finish handles. and diagonal bracing.

Potting Sheds

You will find with our extensive range of Potting Sheds, The Potter which would sit beautifully in a more contemporary garden, The Suntrap being the most traditional potting shed and The Kew which has the extra height advantage, there is something to suit all your needs, whether you are a keen gardener or a novice just starting out, we have combined storage with growing and planting space. The large glazed frontage comes complete with toughened glass for safety, two side windows to allow as much light as possible into the building, a two tier fully boarded storage/work bench and opening windows all as standard (one opening window in the Suntrap and two in the Potter and Kew).

Utility Buildings

The Regency Garden Buildings range of sturdy utility buildings are available in a large range of sizes, styles and timber options (deal, deluxe or cedar) Along with a range of options you can design exactly the building that best suits your needs whatever your budget.

All of our buildings are fully tongue and grooved Scandinavian pine throughout including most vitally the roof and floor, we do not use any chipboard or plywood in any of our buildings, ensuring a good quality product every time.

This offers a good product at a reasonable price and ensures strength and longevity to your building and with a little yearly TLC will serve you for many years to come.

 2440 x 1830mm (8' x 6')

Eaves height

1550/1725mm

Ridge height

(7') 2100mm
 (8') 2140mm

Standard features

50x50mm tanalised floor joists, manufactured to British and European safety standards, 1 double and 1 single perspex window, 2 window boxes, upstairs, ladder, handrail, piano safety hinges, safety rail, 380mm canopy, diamond window in door, plain trims, decorative window crosses and shutters, diagonal bracing and polyester roofing felt.

Two-storey play buildings are not suitable for children under 36 months of age.

Information to assist you...

Regency Garden Buildings Ltd have been manufacturing quality buildings for over 40 years and we would like your building to be a useful addition to your garden. We believe these few points will ensure that it is an asset for many years to come. We ask you to bear in mind that timber is a natural product that needs care and maintenance and that it is subject to naturally occurring changes, which we have no control over. Both temperature and humidity can result in some movement to both the timber and the roof coverings. A good quality, durable polyester roofing felt is supplied on all of our buildings. There may be some movement or rippling after installation, this is mainly due to the fluctuation in temperatures. This is beyond our control and is not detrimental to the building or the roofing felt in any way and should settle down after a short period of time.

CONSTRUCTION

We only use the finest European softwood and Canadian Western Red Cedar you will not find any chipboard or sterling board which is associated with inferior buildings in any of our products. All of our buildings come supplied with everything you need to construct it which includes, felt, glass, screws and nails. All playbuildings are supplied with perspex. Toughened glass is supplied on all buildings except the Popular Range which are supplied with horticultural glass as standard although safety glass is available as an optional extra. If you are looking at purchasing a building with an exterior timber cladding of Western Red Cedar please be aware that they are constructed with softwood internal framing, softwood roofs and softwood boarded floors with tanalised floor joists. You may also notice, due to the nature of Cedar, Variations in colour shading, which cannot be avoided. All buildings in our range are supplied with a basecoat which is applied by totally immersing each section in our quality spirit based treatment ensuring penetration on all sides. Many other manufacturers use water based wood preserver, this is a product Regency will not use. Roof sections are additionally protected by green polyester felt on all buildings. With the exception of our popular range all our floors are supplied with tanalised floor joists as standard. Any building larger than 10' (3050mm) on any side may be manufactured in more than one piece for ease of access and transportation.

OPTIONS

Should you find a design you like but one of our standard sizes may not fit your space, then don't worry normally we can adapt one to fit. Our team of joiners can not only make special sized buildings, they can produce a bespoke building to suit your needs, so take a sketch with sizes to your local stockist for a quotation. We also offer a full range of optional extras which can be fitted to most of our buildings. These include double doors, verandahs, heavy-duty floors, special size doors, stable doors, extra height, heavy-duty framing, Western Red Cedar cladding, deluxe cladding, extra windows, toughened glass, opening windows, red, grey, black or green mineral felt tiles, cedar timber roof or cedar shingles.

LOCATION

Consideration to siting a building is nearly as important as the building itself so take time to ensure that the site for your building is correct. Things to consider would be proximity of boundaries which could affect planning, the position of the sun if you wish to maximise natural light. To ensure the longevity of your building we do not recommend that trees or shrubs overhang the building.

BASE

It is essential that the base and foundations are correctly prepared for your building as failure to provide a suitable base could affect both the operating of the doors and any opening windows. We would recommend the base is at least the minimum size of the building ordered, to ensure stability of your building the base must be firm and level. There are three main options, a concrete slab, a flagged area, concrete or timber bearers. Gravel or any similar substance is not recommended. You should also consider allowing a space around the building for both installation and maintenance work, remembering to allow for any roof overhang e.g. re-treating annually with Regency Golden Oak wood preserver or similar spirit based product.

SITE ACCESS

Is it possible to get the building in its section form to the installation area, check for any restrictions, obstacles or bends that will prevent access of the timber sections including height and width as most sections will not go through a standard size door. We can manufacture in smaller sections if required at an extra cost.

GENERAL CARE

To maintain the quality and appearance of your building for many years to come, we believe that by following these few points this is fully achievable. We recommend that your building is treated annually especially in exposed or coastal areas with Regency Golden Oak wood preserver (Available from your local stockist) or a similar spirit based product. It is advisable to oil all ironmongery regularly to allow free movement of parts and to help prevent weathering. It is advisable whenever possible to ventilate your building by leaving windows/doors open. This will allow any condensation to evaporate and help to avoid any water that may gather inside the building. We ask you bear in mind that timber is a natural product and that changes in weather conditions can cause expansion and contraction of windows and doors (especially very hot or very wet weather), this is beyond our control. We also recommend the use of any turn buttons that are fitted to the doors to help with the stability of the timber.

PAINTED BUILDINGS

We take great care when painting your building to achieve the best results & finish. **Please be aware that knots will show through the paint (more so on light colours). This is a natural process and cannot be avoided.** We cannot guarantee against this happening even though the paint system we use does include knot inhibitors. All of our painted buildings are treated internally with Regency Golden Oak wood preserver. The modern paint system we use has been developed to allow resin exudation (on softwood) and tannin (staining in cedar) to raise to the surface and weather naturally.

Standard Glazing

Leaded Glazing

Modern Glazing

Georgian Glazing

3/4 Length Glazing

All the timber used to construct our buildings are from companies who operate a well managed sustainable forest programme. All timber sizes quoted are after matching.

All buildings in this brochure are protected by design and copyright.
