

Guide To Seed Sowing

PREPARE YOUR SOIL

Firstly choose a patch of soil free from weeds, check the seed packet for preferred amount of sunlight. Fork over the soil to loosen it, and then firm soil gently with the back of a rake. Lastly rake over the top soil.

SOWING IN DRILLS

Make a shallow drill using a hoe or trowel, usually the smaller the seed the shallower you will sow them. You can create curved or wavy drills for more of a natural look. Dampen the drills' base and sprinkle or place your seeds along the drill as thinly as you can. Finally fill the drill with soil, firm down and water.

SOW A WILDFLOWER PATCH

To create a mini meadow, sow seeds without drills. Firstly prepare a patch of soil as per above. Scatter the seeds thinly and evenly over the area. You can mix your seeds with sand so you can see where you have sown.

SEEDLING CARE

Maintain regular watering and weeding in the seedlings area, and protect from snails and slugs. Seedlings need space to flourish so make sure you thin out by removing some of the weaker looking seedlings.
