

Current Transformers JPS20N-XXXX-100mA SERIES

The JPS series of split core current transformers is designed for easy and efficient installation, making them ideal for use in both new construction and retrofit applications. The split core design enables quick and simple installation by allowing the CT to be easily opened and placed around the power cable. The JPS series also features enhanced durability, making them resistant to the effects of vibration and shock.

The JPS series of CTs can accurately measure the current flowing through the power line with Revenue grade accuracy. This makes them suitable for use in Power Quality measuring and Revenue Grade metering applications. The unique design of the JPS series is listed under UL 2808 and UL/EN 61010-1, allowing for field installation of the CT in manufactured subpanels and electrical cabinets while maintaining the UL rating and manufacturer warranty. In addition, the JPS series CTs feature a secure locking mechanism that is noticed by a single click sound. This ensures that the CTs remain firmly in place and do not shift or move, providing accurate and reliable current measurement. Overall, the JPS series of split core current transformers offers a convenient and effective solution for current measurement in a variety of

Safety Guide

Safety

The J&D CTs are UL2808 Listed, UL/EN 61010-1, CE, RoHS compliant and certified, are also conformed up to Pollution degree 3, 600Vac CAT IV rated devices.

Please be sure that Failure to follow these instructions can result in serious injury and/or cause damage.

The transformer shall be used in electric/electronic equipment in accordance with the operating instructions of all related systems and component manufacturers with respect to applicable standards and safety requirements.

Follow corresponding national regulations and safe electrical work practices.

This equipment must only be installed and serviced by qualified personnel. And the qualified personnel are those who has skills and knowledge related to the construction and operation of this electrical equipment and installations, and has received safety training to recognize and avoid potential hazards.

When operating the transformer, there may be dangerous active voltages (e.g. primary conductor) in certain parts of the module. Users should make sure to take all necessary steps to protect against electric shock. The transformer is a built-in device containing conductive parts that are inaccessible after installation. Therefore, a protective enclosure or additional insulation barrier is necessary.

Safe and trouble-free operation of this converter can only be guaranteed if transport, storage and installation are carried out correctly and operation and maintenance are carried out carefully.

Remark

- V_o is positive when I_p flows in the direction of the arrow. (o : output, p : primary current)
- Temperature of the primary conductor should not exceed 80°C(176°F).
- Dynamic performances (di/dt and delay time) are the best with a single bar when the primary hole is completely filled.

Attention

Contact areas (air gap) must be kept clean (particle free) to ensure proper performance
