Pasture Raised Statement

To whom it may concern:

BioCysteine3® whey protein concentrate is produced from pasture raised cows.

These dairy cows produce milk for our whey only seasonally. They are milked in spring, summer, and autumn but rested in winter when pasture growth is lower. This seasonal whey production system promotes highly productive, rotationally grazed pastures. The warm climate and productive pastures in the main dairy farming areas enable herds to graze in pasture year-round; largely avoiding the need for additional feed supplements including grain.
