BADU[®] Swimjet Systems

Aquatic exercise is one of the best forms of exercise you can do. Gentle and soothing with no stress on the joints or bones, swimming has historically been a superior method for staying in shape.

If you're considering building a new pool, a BADU SwimJet System will create an aquatic workout centre and water park in your own backyard.

You can swim, play, exercise and relax with a BADU SwimJet System at whatever intensity is right for you - everything from

triathlete level to just messing around with the kids.

Designed and engineered in Germany from the highest quality components, BADU SwimJet Systems have over 95% of the market in the United States.

WILL THEY FIT IN MY POOL?

The BADU SwimJet System is recommend for a minimum pool size of 4.2m x 2.1m. A Badu SwimJet System will turn your pool or spa into a lap pool, treadmill, aqua gym or just the most popular pool in the neighbourhood.

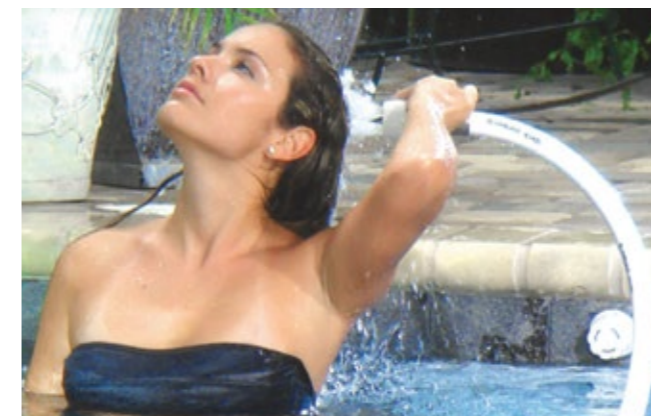

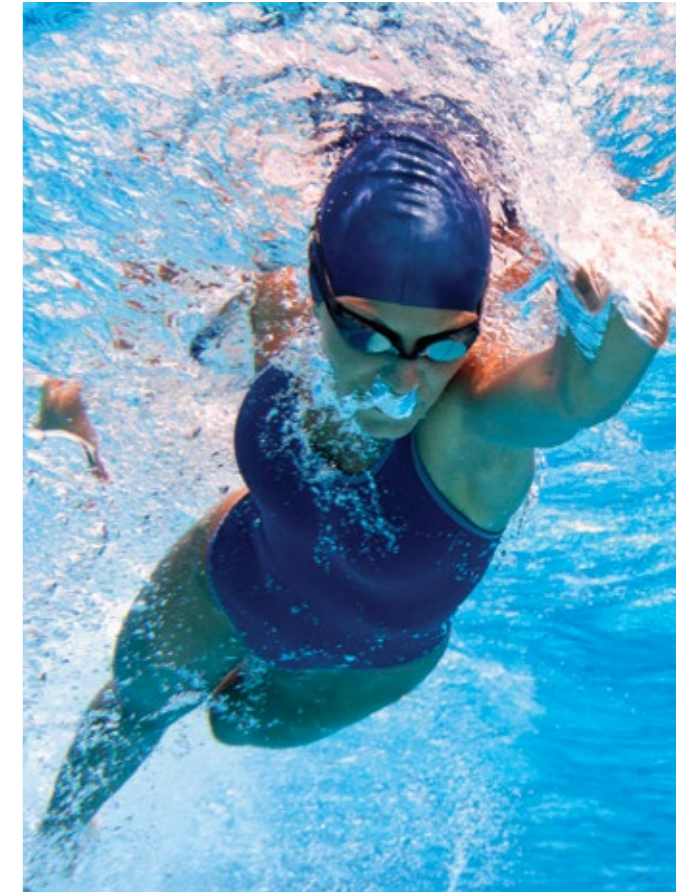

And, because the Badu jet housing contains both suction and return, no additional fittings are required.

HOW DO THEY WORK?

A BADU SwimJet System consists of two specifically engineered jets mounted in the pool wall, each one powered by a Speck 21-80-32 pump capable of pushing up to 1,100 litres per minute through the jet. The jet nozzles can be adjusted to change the depth and width of the current for a hard core swim session through to low impact water exercise. As a bonus, a massage hose can be attached to a jet nozzle to deliver a pulsating, relaxing massage.

ARE THEY ADJUSTABLE?

Yes, the flow of water from the jets is adjustable from the unit itself (simply turn the nozzle clockwise or anticlockwise to control the intensity of the stream). In addition, the system features an air mixture value to give you control of the aeration. With the addition of a Speck Remote Control unit, you can switch the system on or off from anywhere in or around your pool.

* Optional massage hose

ARE THEY SAFE?

All BADU SwimJet Systems comply fully with all Australian safety regulations, particularly with regard to electrical and pool and spa anti-entrapment measures.

ARE THEY HARD TO INSTALL?

BADU SwimJet Systems are simply installed by your pool builder in 2 stages. The jets are installed in waterproof housings in the walls of your pool – either concrete or fibreglass – at construction stage, with the other plumbing. The powerful Speck pumps are then installed once the pool shell has been completed.

ARE THEY HARD TO SERVICE?

Because there are no moving parts in the pool at all, your BADU SwimJet System, is simple to maintain and service.

WARRANTY

All Speck swimming pool pumps come with a 5 year warranty on the wet end and a 2 year warranty on the motor. BADU Swimjet Systems are guaranteed against any faults in workmanship or materials. Please note that their performance is only guaranteed if the BADU Swimjets are paired with the appropriate Speck pool pumps.
