Blue Tactical: Solutions

Defining Requirements

Sourcing and Procurement

Blue Tactical's requirements process results in more operational capability, requiring less resources

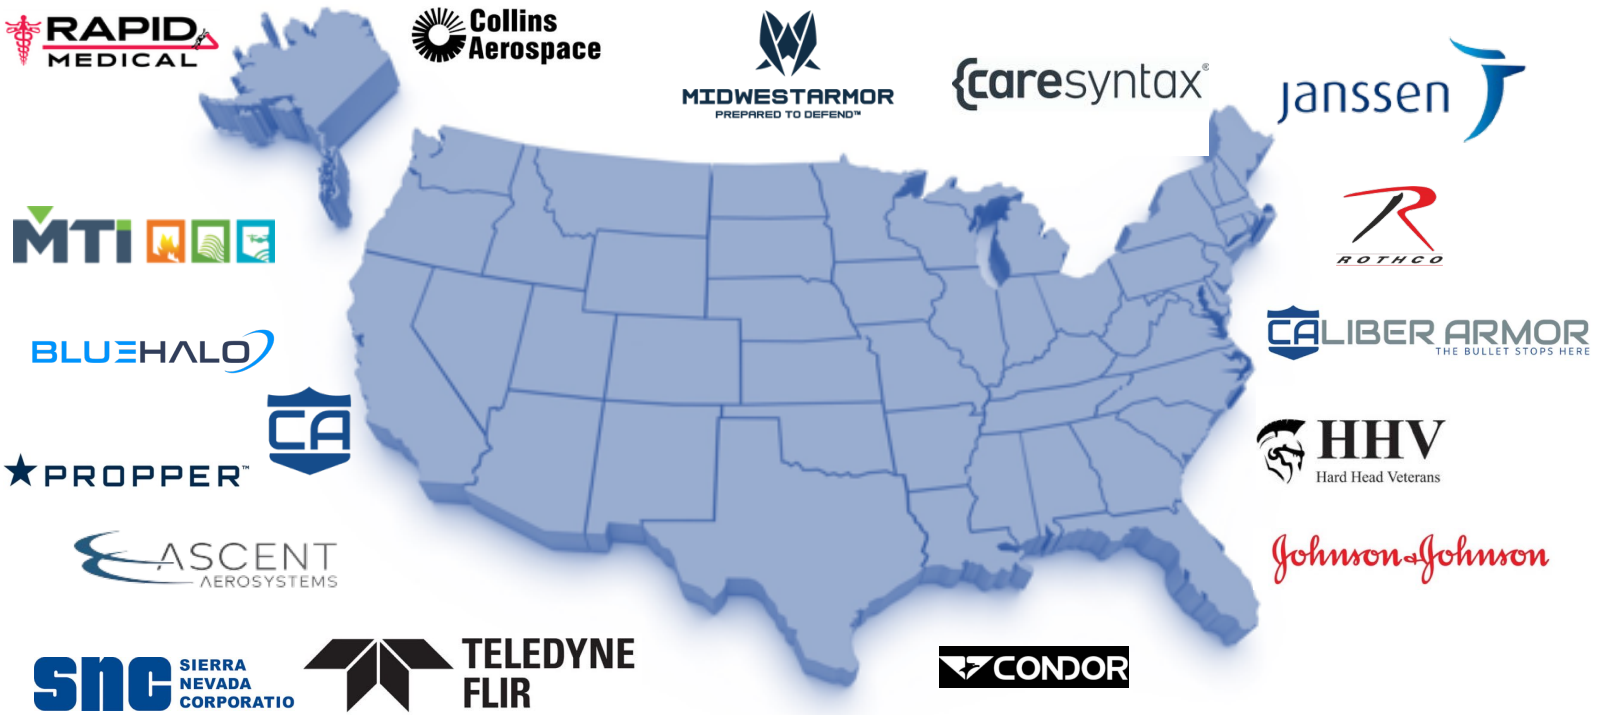

Licensing, Customs, and Shipping

Training, Sustainment and Support

Our Suppliers and Partners

Founded in 2005, Blue Tactical has strong, direct relationships with the manufacturers of everything that we sell. Our products are made to order and designed to meet your exact requirements. Because we work directly with manufacturers, you are guaranteed the lowest price and highest quality products.

HQ in Massachusetts, Office in Washington DC

75+ years of aviation, defense, and acquisition experience

50+ projects across Africa, Europe, and the Middle East

Operational Uniforms

Sewn to military specification GL/PD 14-05A

Blue Tactical has partnered with the same manufacturers that supply the US military. Our products were designed and built to the exact specifications of front-line units. Whether you are equipping 25 soldiers or 100,000, we can help you design and source the highest quality uniform that meets your exact specifications.

From the front-line to the emergency clinic, Blue Tactical is ready to support the physicians, nurses, and combat medics that keep us in the fight.

IFAKs and Trauma Kits

When treating battlefield injuries and mass casualty events, every minute counts. Your medics and front-line providers need the right equipment and medical supplies, and they need them at the ready.

Blue Tactical uses the US Combat Medic and NATO Standards as our baseline, but we custom build every Individual First Aid Kit (IFAK) and Trauma Kit. Our team of highly experienced combat medics and EMTs will use your detailed requirements to tailor the contents and layout.

Individual First Aid Kit (IFAK)

Tactical Medical Supplies

Unit Level Trauma Kits

Pandemic Response
Personal protective equipment, disinfectant, medical masks, goggles and isolation gowns.

Expeditionary / Combat Medical Capability
We offer the highest quality first aid and trauma care supplies for combat medics, EMS crews and first responders.

Expendable Medical Supplies
300,000+ products include personal protective equipment, diabetic supplies, sterilization supplies, surgical instruments, and cold storage.

Diagnosis and Testing Equipment
State of art diagnostic equipment, telemedicine, digital surgical tools, point-of-care lab testing.

Nomex Flight Suits

Flight Boots

Flight Gear Bags

Tactical Flight Helmets

Survival & Operational Flight Vest

Flight Gloves

Radios, computers, and related technology may be subject to export controls

Unmanned Aviation: Mission Applications

Today drones are used around the world for applications that include farming, security, emergency response, and inspection. Drones cost a fraction of a fixed wing platform and offer considerable flexibility. Blue Tactical can help design your drone enterprise, match platforms with requirements, and provide the program management and training that enables your safety and success.

Agriculture and Farming

A single drone can survey thousands of acres in a single hour assessing crop health, livestock location, and environmental conditions.

Facility Security and Border Patrol

Drones can provide 24-hour surveillance of key facilities including ports, refineries, border crossings, and key government buildings.

Law Enforcement & Emergency Response

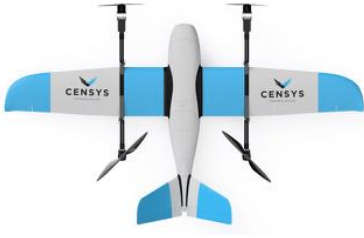

Trained drone crews can support law enforcement through on scene surveillance, crowd control, traffic management and natural disaster response

Critical Infrastructure Inspection

Advanced sensors allow drones to perform detailed inspections of power lines, cell towers, and other infrastructure, safer, faster, and cheaper than legacy methods.

Unmanned Aviation

Wide Area, Fixed Wing Aircraft

Multi Mission Heavy Lift Copter

Tactical Quad Copters

High Definition (40MP) Camera

LiDAR and Thermal Imagers

Multispectral Sensors

Airborne Delivery Payloads

Drones, sensors, and related equipment may be subject to export controls

Blue Tactical also offers integrated counter drone solutions including passive/active detection sensors, electronic and kinetic engagement, and C² systems. The proliferation of drones and unmanned technology is a threat to military units, civilian infrastructure and high value targets every where. Blue Tactical can provide the technology and know how to protect your resources.
