

The novelty, and as a result the idea around Oh! table, is to combine a table with a container that recalls the silhouette and the function of a basket, in this way, expanding the classic possibilities of using a table through a playful language, typical of the Yvé brand. The top consists of two semi-circles that can be opened at 90 degrees so as to have access to the inside of the container / basket. Once closed, the top works like a normal table top. The attention to detail, is enhanced by the choice of materials and colors. The table is coated with powder form which is characterized by impeccable finishing and superior durability.

*For particular needs it is possible to customize colors or choose different material finishes.
