 ISO/IEC 17025:2017 Certification L17-427-1 | Accreditation #B5368

Sample **ALIEN BLUEBERRY - BABY BURN OUT**

Sample ID SD230228-035 (6676)	Matrix Concentrate (Inhalable Cannabis Good)
Tested for TORCH	
Sampled -	Received Feb 20, 2025
Analysis executed QMRUSH CANX	Reported Mar 01, 2025

Labatory note: The estimated concentration of the unknown peak in the sample is 1.16%. Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated CB products) from which we believe to be either  $\Delta^8$ -THC or  $\Delta^9$ -THC. At this time there are no reference standards available for  $\Delta^8$ -THC.  $\Delta^8$ -THC is a different compound from the main  $\Delta^9$ -THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of  $\Delta^8$ -THC and  $\Delta^9$ -THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of  $\Delta^8$ -THC and  $\Delta^9$ -THC with the majority, if not all, of the concentration being  $\Delta^8$ -THC. Total  $\Delta^8/\Delta^9$  CB Concentration is estimated to be 46.76%.

Sample **LEMON VENOM - BABY BURN OUT**

Sample ID SD230228-040 (66907) Matrix Concentrate (Inhalable Cannabis Good)  
 Tested for TORCH Received Feb 20, 2023 Reported Mar 01, 2023  
 Analyzed by QMRUSH, CANX

Labatory Note: The estimated concentration of the unknown peak in the sample is 11.56%. Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated CB products) from which we believe to be either (Δ9-THC or Δ9-THC. At this time there are no reference standards available for (Δ9-THC. (Δ9-THC is a different compound from the main (Δ9-THC cannabinoid and, therefore, these two compounds may have different effects). Using the most advanced instruments and techniques available, the separation of (Δ9-THC and Δ9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (Δ9-THC and Δ9-THC with the majority, if not all, of the concentration being (Δ9-THC. Total (Δ9-THC Concentration is estimated to be 69.53%.

\*This report shall not be reproduced except in full, without the written approval of the lab. This report is for informational purposes only and should not be used to diagnose, treat or prevent any disease. Results are only for samples and batches indicated. Results are reported as of the reporting date, unless otherwise specified. When a result is reported, that result is intended to be in accordance with testing, while the total test result is reported for the customer to be in compliance. The measurement of uncertainty is not included in the final test evaluation unless explicitly required by federal, state or local laws and/or laws required on the certificate of analysis. Measurement of uncertainty is available upon request.

 ISO/IEC 17025:2017 Certification L17-427-1 | Accreditation #B5368

Sample: **VANILA HAZE - BABY BURN OUT**

Sample ID: SD230228-044 (8891)	Matrix: Concentrate (Infusable Cannabis Good)
Tested for: TORCH	
Sampled: -	Received: Feb 20, 2025
Analysis executed: QMRUSH, CANX	Reported: Mar 01, 2025

Labatory note: The estimated concentration of the unknown peak in the sample is 11.77%. Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated DE products) from which we believe to be either (Δ<sup>8</sup>-THC or Δ<sup>9</sup>-THC. At this time there are no reference standards available for (Δ<sup>8</sup>-THC. (Δ<sup>8</sup>-THC is a different compound from the main (Δ<sup>9</sup>-THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (Δ<sup>8</sup>-THC and Δ<sup>9</sup>-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (Δ<sup>8</sup>-THC and Δ<sup>9</sup>-THC with the majority, if not all, of the concentration being (Δ<sup>8</sup>-THC. Total (Δ<sup>8</sup>-THC Concentration is estimated to be: 70.50%
