 Sound Record is off
- Display time/date
- GPS icon: green, when it has GPS signal; white, when it has no signal
- Recording status
- GPS Status: Once gps antenna connected, the GPS icon on the home screen will show

About the Micro SD Card

When using a new MicroSD card, be sure to format it on the main body.

- ① Do not remove or insert a Micro SD card while the power is on.
- ② For stable use, it is recommended to format the micro SD card regularly. Recommend: Once a month

Pay attention to the orientation of the Micro SD card and insert it into the slot (the side with the metal strip faces the back of the dash cam)

Make sure that the micro SD card is securely inserted inside the slot.

※Insert until you hear a click.

When removing the micro SD card, push in the micro SD card first and then pull it out after the micro SD card pops out a little.

Installation

Please check the functionality of dash cam with its all accessories before installation.

How to install the rear camera

We recommend install the rear camera above the license plate.

① Fix camera with screws

Find a best location, use screws to fix the rear camera near by the car license plate lamp.

② Remove the Panel

Remove the inner panel of the trunk to expose the rear wiring compartment of the car. Open the trunk and look for a sturdy inner panel covering the other side of the license plate installation area. Then, insert a decorative removal tool or another thin device behind the panel and pry it apart.

③ Snake the cable

Use a trim removal tool to pop out tailgate trim, then run the cable from outside of the car into the trunk of your car.

④ Connect the rear cameras power cable

to the extension cable. After snaking your rear camera's extension cable, connect the power cable to your rear camera's extension cord.

※If you need to install a trigger cable to activate the reversing guidelines, please find the positive cable of the reversing lamp, or ask a professional for help.

Placement of rear lens inside car

We suggest to install outside car, not inside

Confirm the accessories

1 pc mount bracket (2 pcs black iron sheets)

4 pcs screws (2 pcs small screws, 2 pcs large screws)

- ① Place a iron sheet over the rear camera, aim it at the hole, and screw it on.

- ③ Join the two iron sheets together and turn on the screws.

- ④ Stick the bracket to the rear windshield with 3M glue

Placement of rear lens outside car

We suggest to install outside car, not inside

- ① Tear off the release paper of 3M sticker on Rear lens.
- ② Paste the rear lens directly above the license plate.

How to install the mirror dash cam

- 1 Attach the upper end of the straps to the retaining hooks on the top of the rear-view mirror.

2 Extend the straps around the back of the rear-view mirror and attach them to the bottom retaining hooks.

① Route your rear camera's power cable to the front of the car. If you'd like, use a trim removal tool to pop out the headlining panel directly above your windshield. Then, run your cable through the exposed chamber.

② Power on the dash cam with box included car charger, don't charge it with your own chargers.

③ Test the camera to make sure everything works.

- ④ installation method (Note: GPS module is facing up, placed on the instrument panel).

Q: Why is the front lens picture so dark?

A: Please check if your front camera is facing the sky. If the lens is facing the sky, it will automatically reduce the light reception, causing the screen to darken.

Facing the sky

Adjust the front lens downward

How to install the GPS

① GPS front and back

② Installation location

Considering the use effect and installation convenience, we usually recommend customers to install it at position 1. Of course, you can also try to install it in other locations for testing, and choose the location you think is most suitable.

GPS Working

When GPS is not connected: There's nothing there

Q: Why is my GPS not working? /How to use GPS ?

A: If you cannot receive the signal after inserting the GPS , please follow the steps below.

- ① The vehicle must be within a large area.
- ② Insert the GPS plug again.
- ③ Place the GPS plug upward.
- ④ Restart
- ⑤ It will be recognized after about 40 seconds.

If still cannot receive the signal, it may be a GPS problem. Please CONTACT US and we will help you solve this problem.

Date&Time Setting

TimeZone Setting

It will automatically update the time according to your location and time zone due to GPS, so you do not need to manually change the time. But you can adjust the daylight saving time by changing the time zone.

Time Zones - GMT (Greenwich Mean Time) Values

UTC/GMT-12:00	UTC/GMT-11:00	UTC/GMT-10:00	UTC/GMT-09:30

• With GPS connected:

-  Speed & Driving Direction: Once GPS is connected, the information will show
-  Settings: Touch to enter the menu setting
-  File Playback: Playback the video & Photo
-  Start / Stop Recording
-  Snapshot: Take a Snapshot
-  Date & Time
-  Recording Status: Yellow flashing means Lock Recording
-  Audio Record is on
-  Button's beep sound status
-  GPS Status: Once the GPS signal is successfully received, the icon will turn **GREEN**. Otherwise, it turns **WHITE**.

On the **LEFT** side of the screen: Slide up and down to adjust the angle of view.

On the **RIGHT** side of the screen: Slide up and down to adjust the brightness.

Anywhere on the screen: Swipe the screen left or right to switch between front view, rear view, or split-screen view.

Power ON/OFF

- If you turn on the engine (ACC on) while the cigar power adapter is connected, the power will be turned on automatically and the opening screen will be displayed.
- Press and hold the power button to turn off the power during startup, and then briefly press the power button again to turn on the power of the unit and display the opening screen.
- Briefly press the power button to turn off the screen.

Menu Settings

After powering ON the camera, press the  button to enter the setup process.

Icon	Function	Function options
	Adjust the video recording resolution.	4k (3840*2160)+ 2.5k (2560*1440) 2.5k (2560*1440)+ 2.5k (2560*1440)

	Adjust the loop recording duration.	1min / 3mins / 5mins

Icon	Function	Function options
 <p>G-Sensor Sensitivity</p>	Adjust the sensitivity of G-sensor. It is recommended to adjust to "Low".	OFF LOW Middle High

Gsensor detects the impact and performs fixed time video recording for **20 seconds**.

Emergency video recording time is the video file before impact + 20 seconds of emergency video.

When the car crashes at 28 seconds, the normal recording time is 28 seconds, and then the G-sensor detects the impact for 20 seconds, so the emergency recording time is 48 seconds.
