

Pmc3 Pre-made Slip.

Ready made PMC 3 slip is an extremely smooth runnier version of normal lump form PMC. The consistency is that of double cream and is used for adhering any PMC together to create strong bonds once fired.

To use, simply paint the slip liberally onto each part of your PMC design to be joined, and push gently together. Without the use of the slip the PMC will not fuse together and can come apart when fired.

Because of the fineness of the pre-mixed slip it can also be used to paint over organic items, such as leaves and seed pods, and once fired will leave the perfect reproduction.

To use on an organic form paint three or four layers of slip over the item allowing them to dry in-between, and fire and polish as normal.

The slip can also be used on other forms, it can be painted onto glazed or unglazed ceramics, it can also be used on glass! Or simply used to give a thick luscious frosting onto of any PMC.
