Meet UniFit™:

Your Unified Connection

30 years of implantology knowledge & experience are implemented into the UniFit.
We took the best of our platforms and combined it to our new UniFit:

Surgical and restoration procedures have many challenges. That's why we are focused on making the complex simple. With UniFit, one unified prosthetic connection fits all.

When there is only one connection for all implant diameters, it simplifies surgical and restoration procedures.

Comprised of a friction 7° conical connection with a six positions, star shape index, UniFit will ensure a solid fixture of the abutment that both enhance the implant-abutment seal and minimizes micromovements.

The Unifit design enables simple yet flexible implant and abutment alignment and supports self-guiding insertion for clear cut tactile feedback.

The Unifit implant external geometry and surface is designed for immediate function and loading and optimal stability in all bone types.

Every feature is designed to enhance the success of the procedure and deliver better results. And that means a better experience for both doctors and patients.
The concept is simple. The results are immediate.

UniFit

The ultimate implant, designed for simplicity and total success

The UniFit Spiral Implant is a tapered implant with a spiral tap that condenses the bone during implant placement for immediate stability. It has two large variable threads and a tapered design for accurate implant placement, self tapping, improved esthetics and better load distribution. Its unique design allows immediate function for all bone types.

The UniFit features ADIN's unique OsseoFix™ - Calcium Phosphate blast surface treatment.

Drilling Sequence

Drilling speed** (rpm)	800-2000		800-2000		800-2000			800-2000		
Implant Diameter	Ø3.5/3.75		Ø4.3		Ø5.0			Ø6.0		
 <p>Hard Bone</p> <p>D1, D2</p>										
	*Tri-step	Ø3.5/3.75	Ø3.6	Ø4.3	Ø4.2	Ø4.6	Ø5.0	Ø5.2	Ø5.6	Ø6.0
 <p>Soft Bone</p> <p>D3, D4</p>										
	*Tri-step	Ø3.5/3.75	Ø3.6	Ø4.3	Ø4.2	Ø4.6	Ø5.0	Ø5.2	Ø5.6	Ø6.0

* For initial drilling, you may use Ø2, Ø2.8 and Ø3.2 drills in sequence instead of the Tri-step drill.

** Drilling should be performed at low speeds (800rpm-2000rpm) in accordance with bone quality at the specific site.

All measurements are in mm.

*For initial drilling, you may use Tri-step drill instead of Ø2, Ø2.8 and Ø3.2 drills in sequence.

Note: (x.xx) drill to the depth of the cortex only. All measurements are in mm.

⚠ CAUTION: The drill preparation is up to 1mm longer than the implant. * The drill apical step = 1.8mmD.

Impression

Our components for taking impressions for all restoration types can be successfully utilized for digital or conventional protocols either implant-level or abutment level procedures.

Our broad range of solutions and flexible designs enable easy and accurate restorative planning, whether you're dealing with a single tooth, multiple teeth, bridge or full mouth rehabilitation.

TMA™ - Multi Unit

Recommended Torque 35(Ncm)

Our TMA™ (Trans Mucosal Abutment) system is indicated for multiple-unit, screw-retained restorations and may be used in combination with an implant level framework design.

The TMA™ system is used to elevate the restorative seating platform when restoration at implant level is not indicated or practical due to the depth or angle of the implant.

The TMA™ System is designed to allow better prosthetics access when using implants with divergent angles accommodate full and partial edentulous arches, especially when using angled implants and all-on-x technique for full arch restoration.

The TMA™ abutment system is available in straight or angled (17°,30°,45°), engaging the Conical Connection for indexing, with a selection of collar heights. Abutments are delivered with handles for easy insertion and to assist with seating.

Single TMA™

Recommended Torque 35(Ncm)

Adding to Adin's verity of the screw-retained restoration range, in comes the single TMA. Utilizing all the benefits of the TMA abutments while allowing the accuracy and flexibility for single tooth restoration.

Adin's STMA offer the possibility to combine the benefits of trans-gingival approach and screw-retained single tooth restoration yielding greater flexibility in both esthetics, safety and restoration maintenance.

Adin's Single TMA is based on the TMA abutment, while the added hex index offers both the required accurate positioning and retention to support a single tooth crown.

Open and closed tray transfers as well as scan bodies for digital impression are available to match every preferred impression method as well as replicas for straight forward and simple work process.

CAD CAM

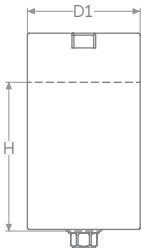

Adin's CAD - CAM components and digital libraries enable dental clinicians and technicians to design and manufacture state-of-the-art restorations supported by Adin's implants, using current and up-to-date digital restoration processes.

The variety of components ensure endless restorative options for treatment of single, multiple, partially, or full edentulous cases.

Surgical Kits

Successful surgical procedures start with having the right instruments and tools to ensure your desired treatment outcomes are met.

That's why our range has everything you need, including drills, keys, ratchets and insertion tools. Not only do they make procedures safer and simpler, they result in an enhanced patient experience as well.

Our Surgical Kits streamline and simplify your implant procedures.

Drills & Tools

Our DLC (Diamond Like Carbon) Tri-Step/Twist Step Surgical Drills are uniquely designed and coated to improve the surgical drilling process.

Tri-Step & Twist-Step DLC drills simplify the cutting process, save time and minimize risks.

Our improved DLC drill coating provides state-of-the-art hardness and slickness that increases lifespan of the drill, maintains sharpness for extended drilling and generates less heat, thereby reducing chances of heating the bone or complications arising from conventional drilling protocols.

The drills come in the following diameters(mm): 2.0, 2.5, 2.8, 3.2, 3.6, 4.2, 4.6, 5.2, 5.6

Specially designed for Adin's implants and suitable for their simple and convenient drilling protocol.

They are clearly and conveniently marked and can be used with or without drill stops.

L	Ø	Tri-Step Drills	Size	Catalog No.
	1.8-3.2		short	TD1511
	1.8-3.2		long	TD2218

Adin's Tri-Step drills condense drilling protocols and avoid the need for using multiple drills throughout complex procedures.

Because friction at the cutting site is reduced, complications common with high speed drilling are decreased and faster & better recovery can occur.

L	Ø	Twist Step Drills	Color	Catalog No.
<p>short</p> <p>6-13mm</p>	2.0		white	DL1320

Guided Surgery

The adinguide™ was created with you in mind, bringing the guided surgery world to your clinic. The kits were specifically designed to support effortless procedures, accurate and predictable implant placement. The ActiveFlow™ Irrigation Technology' is a unique design that forces coolant through the guide to ensure irrigation reaches the bone and prevents overheating.

The adinguide™ drills are designed with carved channels which allow saline coolant from your hand-piece to stream through the sleeve directly into the osteotomy site while drilling.

Our uniquely designed drill kit is intuitive and easy to use by implant diameter and length. The Tissue Punch and Pilot Drill allow for easy flapless access.

Keyless procedure enables easy handling and full visibility of surgical field.

Self-centering drills – controlled by a 5.5mm / 3.3 mm / 2.0 mm diameter cylinder at the top of each drill centers the drill in the guide's sleeve.

Self-centering cylinder engages the sleeve before the drill engages the osteotomy in order to ensure correct positioning of the drill.

Built-in stoppers – ensure precise and accurate drilling to the desired depth.
