

Jeep Comanche MJ (1986-1992)

Rear 6.5" Speaker Brackets

Part Number: 55006736-65

Installation Instructions

Included Parts:

- (1) Left Speaker Bracket
- (1) Right Speaker Bracket
- (2) Plastic Spacer Rings
- (8) Self-tapping Screws

Note:

These brackets are intended for standard 6.5" round automotive speakers. All speakers are different and may have different dimensions requiring different installation techniques. Dry fit all parts before installation.

Installation Steps

1. Optional - Remove your seat in order to better access the B-pillar covers and speakers.
2. Remove plastic B-pillar covers from behind seat. Remove existing speakers and brackets (keeping the installation screws).
3. Test fit new 6.5" speakers with the brackets to ensure proper spacing. Most speakers will require the use of the included plastic spacers.
 - a. *Speakers are oriented based on the attached labels. Make sure they are right-side up based on the orientation of the text.*
4. Align your speakers within the brackets and drill guide holes by mocking up your speaker in-place.
5. Attach speaker to bracket with include screws and plastic spacer ring.
6. Install assembly into vehicle and verify functionality before replacing B-pillar covers.

Note: Some deep speakers may require modifications to the B-pillar. This can be achieved by installing the bracket (without speaker) and using a 5" hole saw to remove material from the B-pillar. This is not necessary for most speakers when using the included plastic spacers. Perform at your own risk.

Disclaimer: Brackets may have sharp edges--caution. Can be left unfinished or painted as desired. Requires mechanical knowledge and tools to install at your own risk.
