## Treatment Menu

### The Dr Sebagh HydraFacial

This highly sought after, powerfully rejuvenating and glow-boosting facial is expertly tailored to meet the needs of all ages and skin types. The 45 minute-long, non-invasive treatment uses unique HydraFacial technology to help reverse the signs of premature ageing caused by pollution, toxins, UV rays and other external aggressors.

After a thorough consultation, the HydraFacial involves three core steps:

1. cleanse and peel (with gentle exfoliation and relaxing resurfacing)
2. extract and hydrate (to decongest pores and intensively moisturise)
3. fuse and protect (to deliver antioxidants and peptides to the skin and boost radiance).

The innovative and award-winning HydraFacial Vortex Technology, featuring a patented spiral tip, is used throughout the treatment to deeply cleanse, exfoliate and extract impurities, whilst also replenishing the skin with essential nutrients.

The treatment concludes with a bespoke application of Dr Sebagh Advanced Ageing-Maintenance Skin Care products. After the first HydraFacial, skin looks noticeably smoother, firmer, plumper and glowing with health. Dr Sebagh recommends building on and maintaining the benefits with a monthly treatment.
