

Calais Golding

Calais Golding is a true Golding variety, almost identical to Early Bird with light but spicy flavouring and sweet aroma, but heavier yielding & early maturing. There is special demand for these hops for use in copper hopping and dry hopping of traditional ales.

Goldings are also found to be useful for late hopping lagers when a delicate aroma is required. The cones produced on this variety are very full and ornamental as well as a superb variety for brewing. Calais Golding has a moderate to strong growth habit and will grow to approx. 15-20 feet once mature.

Growing Information

Season Maturity	Early
Ease of Harvest	-
Yield	640 kg/hectare
Wilt Resistance	Sensitive
Powdery Mildew Resistance	
Downy Mildew Resistance	Moderately Resistant
Hop Mosaic Resistance	Extremely Sensitive

Virus Information

Arabis Mosaic Virus	Negative (2017)
Prunus necrotic ringspot virus	Negative (2017)
Hop Stunt Viroid	Negative (2017)
Hop Mosaic Virus	Negative (2017)
Hop Latent Viroid	Negative (2017)

Brewing Values

Alpha Acid	4.0 - 6.0%
Beta Acid	1.9 - 3.0%
Alpha - Beta Ratio	-
Hop Storage Index	-
Co-Humulone	25 - 30%
Total Oils	0.4 - 0.8 mL/100g
Myrcene	25%
Humulene	36%
Caryophyllene	-
Farnesene	trace
