

Teens and Twenties Counting Cards

These "Teens and Twenties" Counting Cards" are designed to give children practice counting quantities greater than ten by starting with ten objects in a box, and then counting on from there.

1. Have children choose a card and tell how many objects they see, counting if necessary. Give children an empty egg carton cut down to just ten spaces rather than twelve, and have him or her build that number in the carton as it is shown on the card, placing the objects that don't fit in the main compartment spaces into the lid.
2. Staple the cards to a wall in your classroom. Drill the class daily on how many objects they see. Then have everyone count the objects aloud together as a group. Always remind them: "How many in a box?" (Ten.) Then start counting with eleven. Or, count by tens to get to 20, and then begin counting with 21.
3. Have children count the number of objects, and then write that number on a white board.
