

Apple Project

This is a very simple project, and is good practice for children that are still learning to use and control a pair of scissors.

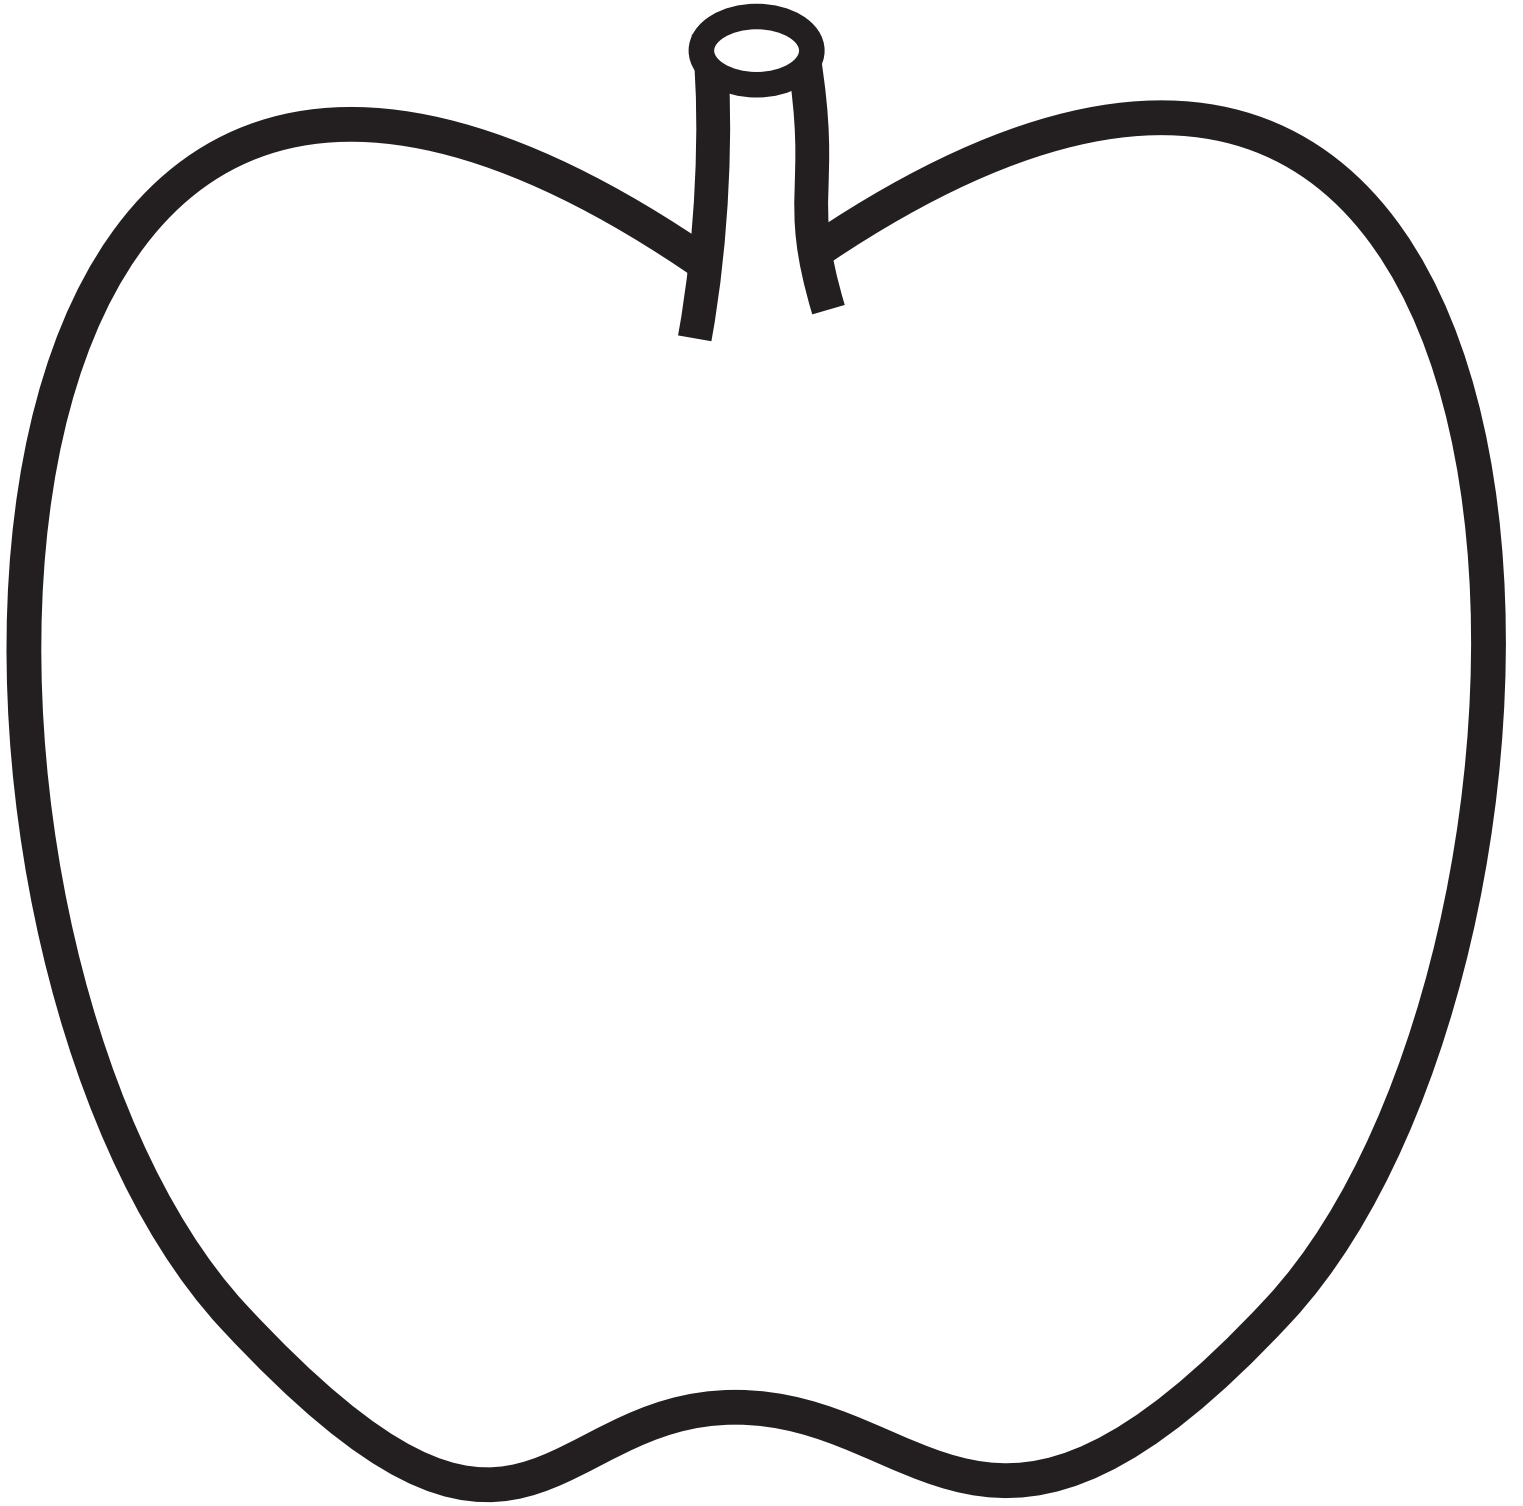

Preparation:

1. Copy one apple per child, usually on red construction paper.
2. Cut one piece of 3" x 2" green construction paper for a leaf for each child.

To Make the Apple:

1. Show the children how to cut out the apple and color a face on it, if you desire.
2. Round the corners off of the green rectangle to form a leaf and glue it behind the apple.
