

Summer Learning Loss

2/3 of the achievement gap seen in 9th graders is caused by summer learning loss in early elementary school.

Low-income students experience a loss of 2 months worth of reading achievement.

Teachers typically spend between 4 and 6 weeks reteaching material that students have forgotten over the summer.

○ 2.6

Due to a lack of practice at home, on average students lose 2.6 months of mathematical computation over summer months.

A
Z

Students score lower on standardized tests at the end of summer compared to the end of the school year.
