Data sheet and list of spare parts for Red Dragon® 3 pump HIGH PRESSURE VERSION

For all Red Dragon® 3 Speedy 230 Watt / 19,0m³ pumps (High Pressure)

v1.0

ENG

Since 1986

Data sheet and power curve for pressure pump with adjustable speed motor

Red Dragon® 3 Speedy pump 230 Watt / 19,0m³ Product no.: 606/HP 1.230,00 €

Technical data Red Dragon® 3 Speedy pump 230 Watt / 19m³:

Performance:	19.100 liter / h
Cable length:	0,8 meter (plug controller) 3,8 meter (controller to pump) pump and controller with a removeable Hirschmann-plug-connection
Pressure side:	Ø 40 mm Intake side: Ø 63 mm
Wattage:	adjustable max. 230 Watt (min. 20W)
Pressure height:	max. 8,85 meter
Material/color:	PVC black/red/grey with screw connection
Operating voltage:	230 Volt 50 Hz (also in 110V/60Hz available)
Noise level:	39 - 47 db at full speed (measured in 1 m distance - operation external)
Protection class:	IP 68 (submersible pump) IP 66 (controller)
Weight:	4,7 kg
Height of intake side:	center 70 mm
Dimension pump:	~ 130 mm wide / 295 mm length / 220 mm height
Dimension controller:	~ 190 mm wide / 168 mm length (250 mm with connection cable) / ~ 84 mm height

- ////////////////////////////////////
- Saltwater resistant M6 grade 2 titanium screws
 - Saltwater resistant parabolic rubber feet for acoustic decoupling
 - Extreme low noise brushless dc-delivery pump with grouted power electronics
 - High efficient technology Made in Germany
 - Inlet and Outlet complete with DIN connection, compact dimensions
 - High performance ceramics bearings and hollow shaft for bypass purging in the rotor housing
 - "The only" saltwater resistant pump with titanium rotor, titanium stator and shrivelled bearings
 - Easy usage and maintenance. Low risk of calcification due to polished titanium parts and compulsory purging
 - Heavy and massive craftsmanship against vibrations and oscillation
 - CE conformity, developed and built according to VDE guidelines
- ////////////////////////////////////

The direct control/connection of Aquarium computer possible!

Prepared for connection to an aquarium computer (E.g. GHL) via a 0-10V interface. No additional controller needed. tested so far following these two computers: GHL ProfiLux 3.1 and from Neptune Systems the Apex Aqua Controller.

Functioning of the electronics:

Once a voltage > 0,5V to the 10V interface is, the interface adapter takes over controlling and the system and lock(disable) the buttons on the controller. Voltage will be < 0,5V normal controller operation and the buttons are again released. So can the interface adapter stay connected without performing a function.

If the Aquarium(tank)-computer voltage under 0,5V the 0-10V interface is shut down and the pump can be operated manually. From 0,5V, the interface will take over control of the scheme. In the area of 0,5V-0,8V the pump is switched off. From ~ 0,8V starts the pump at the lowest level (20W) and run. At an increase of steps in 2W up to 9V=230W. So 1V = 20W 9V = 230W. The applied voltage and the resulting performance will be shown in the display.

At a higher input voltage remains the Speedycontroller to the maximum setting are available and no longer increases. The interface adapter behaves as if the corresponding would push the button.
