

NON-OXIDATIVE CHLORINE

- NSF 60 Certified • No premixing to control pH • No corrosive fumes
- No shelf life limitations • Easy to use • Use with drilling fluids at 10-50 ppm without breaking down viscosity

STERILENE is 200 times more effective at removing the environment for coliform bacteria in wells and pipelines. It is a sodium based, granular chlorine that does not require controlling the pH by adding vinegar or acid to make it effective. Sterilene is competitively priced and far more effective than standard chlorines (liquid sodium hypochlorite or calcium hypochlorite). This proven product reduces costs, maintenance hours and equipment failures.
