

## Assembly Instructions: J005 & J009 - 3 Tier Display Stand

You should always dry fit the pieces together to ensure they are all there and you know how to assemble it.

When ready to glue follow the instructions below adding glue to the slots and meeting edges. Ensure to wipe off all excess glue before it sets.

- 1) Lay back piece flat and insert sides in to slots, it will end up looking like fig 2.
- 2) Add the bottom front face, this is the piece with 2 holes, all pieces are made to only go together one way
- 3) Stand up and add top piece as in fig 4. Keep adding the front faces and top pieces until complete as in fig 5
- 4) Use clamps or straps to keep together until glue has dried fully. If clamps or straps are not available you can get the same result using strong elastic bands.

The larger J009 version is assembled exactly the same except you add and glue the additional centre support.

**Fully assemble BEFORE painting!**
