

#LIVEPEBBLY

We're on a mission to help you incorporate simple rituals into your everyday life that add up to a healthier, brighter future for all of us.

The best part is you can start anywhere on the path to #LIVEPEBBLY - because every little choice we make leads to more good choices.

And just like one little pebbly can create a ripple, with enough ripples, together we can make waves.

Where will your #LIVEPEBBLY journey begin?

Sustainable Kitchen Design

Serve a Purpose

Pebbly cutting boards, bowls and serving utensils are made from bamboo, making them as beautifully designed as they are planet-friendly.

Small Choices, Big Impact

Choosing cooking utensils made from natural materials reduces the strain on our natural resources, bringing joy to your kitchen every time you cook.

Measure Your Impact

BPA- and toxin-free, our Borosilicate glass bowls and measuring glasses are safe for oven, freezer and dishwasher use - and a healthier alternative to plastic.

Transparent Storage Solutions

See-through storage

Free of BPA, phthalates and other toxins, our glass food containers are an eco-conscious way to keep your leftovers fresh longer, reducing food waste going to landfills.

Stay Eco-Organized

Our glass storage containers feature airtight bamboo tops, keeping ingredients fresh longer - and your kitchen looking clean and inviting.

Conscious Countertops

Using eco-friendly natural materials to store your utensils and food items puts less strain on our planet's limited resources and maintains kitchen zen.

Waste Reduction Practices

So long, single-use plastics

Every time you use your Pebbly glass water bottle or reusable grocery bulk buying bag made of organic materials, you keep harmful plastic out of oceans and landfills.

Meal Planning 101

Stretch your groceries (and dollars) farther by shopping for ingredients you can use in multiple ways and keeping your leftovers fresher, longer in our sealable glass containers.

Good to Grow

Our stylish compost bins make it easy to reduce the amount of waste we send to the landfills (which contributes to the production of methane gas fueling climate change.) and they look great in your kitchen too!

Join us on a better path forward, for all of us and our planet, with every little choice you make in your kitchen and beyond.
