PRODUCT OVERVIEW

Take control of your drive with Alpine's premium night vision dash camera system featuring built-in drive assist and function control through your Alpine head unit.

PRODUCT FEATURES

1080p Full HD Recording – No matter the driving condition, the DVR-C320R captures the footage of your drive in full 1080p HD with a 140° viewing angle. Wide Dynamic Range (WDR) technology automatically adjusts the exposure and white balance for a clear recording during sudden lighting changes or night driving.

Impact Triggered Recording – The DVR-C320R doesn't stop recording after the engine is turned off. When parked, the DVR-C320R enables impact triggered recording and will record up to 10 seconds after impact.

Built-in Drive Assist – The DVR-C320R includes a front collision warning that alerts you when you're near the vehicle in front of you. Lane departure warnings alert you when you veer too far from the lane. Finally, a front car movement warning alerts you when you're stopped in traffic and the car in front of you has started to move again.

Monitor Your Vehicle on the Go – Footage captured by your DVR-C320R can be viewed on your smartphone with the free ALPINE Recording Viewer app. View real-time recording around your vehicle with Live View or review past recordings with the File List option.
