Screw & Nut for Lever

Mounting Screws for Column Assembly

Column Replacement Screw

**Follow these
SIMPLE STEPS**

- 1 Stand the column assembly right side up. Be sure the rod is not protruding out of the top. Insert the lever with the rounded side facing up into the column assembly. Ensure that the flat side of the lever rest on the rod (**see figure 1**).

- 2 Lay table top upside down on a flat surface with the mounting bracket facing up. While holding the lever securely in place on top of the rod, flip the column assembly upside down and insert the column assembly into the table top mounting bracket (**see figure 2**).

Note: Do not tilt the column assembly until the lever is holding the rod to prevent it from falling off.

- 3 Align the horizontal hole of the column to the table top mounting bracket, and align the holes on the column assembly to the hole through the lever. Insert the lever screw and fully tighten the nut (**see figure 3**).

Figure 3

- 4 Secure the column assembly to the mounting bracket with 2 mounting screws through the vertical holes in the mounting bracket and into the threaded holes in the column assembly (**see figure 4**).

Figure 4

- 5 Locate the 2 holes on the H base. Insert both bolt sleeves into the bottom of the H base. **Do not tilt the H base** (**see figure 5**). Align the H base to the column with wheels facing up while table top is upside down. Place the metal plate to the H base holes and tighten both bolts (**see figure 6**).
