

# Key Dates for Astral & Velocity Cultivation

## BEFORE YOU PLANT

Phylos Astral & Velocity Series genetics grow best in areas with a soil temperature of 60°F, trending upward, and when ambient air temperatures are between 55°F and 90°F.

- Refer to the USDA Hardiness Zone map.
- Check on the first and last frost dates of the year.
- Understand the soil temperature for the planting region.
- Understand length of daylight at your latitude for flower initiation.

The varieties may be protected, or having pending patent applications, and may not be propagated or reproduced without written authorization.

Any representations and other information are based on our observations and/or information from other sources. Crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, production system, the environment, including management, and other uncontrollable factors that may alter expected performance. Statements concerning the reaction of varieties to a specific pathogen, pest, stress and/or production system are based on evaluation under defined conditions. These reactions can be affected by changes in environmental, production systems, and biological factors, especially new pathogen races, pest biotypes or vectors of disease agents.
