

# Brent's Concentric Sight

Congratulations on your purchase of Brent's Concentric Sight! You will be pleased with this sight. It is very durable with glass-coated optics. Feel free to polish fingerprints and dirt off the surface with your t-shirt. You won't scratch it with soft cotton cloth.

## **The basics of Brent's Concentric Sight:**

The sight consists of:

- 1 threaded stainless steel post
- 1 bezel with glass covered optics and threaded retaining ring

The bezel has a threaded retaining ring which holds the optic stack in with a small rubber o-ring.

The shaft comes off to allow you to custom cut the shaft without endangering the optics (in the garage near the saws, you know). Once the shaft is cut to size, you should tighten the bezel down to the shaft. Whatever you do, DO NOT attempt to tighten the bezel to the shaft by grabbing the aluminum surrounding the optics. You may use a crescent wrench at the base of the bezel near the shaft, but place a cloth over the bezel so you don't scratch it.

There is a calcite crystal in the optic stack. The Concentric Sight is a delicate optical instrument and should be treated it as such. Do not leave your helmet in the trunk of a car in the hot summer sun, or in a team room overnight when the temperatures will freeze.

Enjoy your sight! It will last you a long time.
