

For Best Results:

- Apply 2 cups (1 pint) of brewed Wonder Brew per cubic foot of soil to the base of established plants once a week throughout the growing season. Use in combination with Wallace Organic Wonder Gardening products: WOW Super Starter Paks (to be applied at time of transplant)

Step 4

Cleaning your Brewer

- Run aerator with 2 gallons of warm water and ¼ teaspoon anti-bacterial soap for five minutes and then drain completely.
- Run again with 2 gallons of plain warm water without soap for ten minutes.
- Wipe dry with a clean towel.

***** Very Important *****

Rinse and fully clean Wonder Brewer between every use.

WOW Wonder Brewer is for indoor brewing only.

WOW Wonder Brewer

Instructions

Important! Organize the parts and verify that all parts have been included in box before proceeding:

- (1) 5-10 or 25-50 Gallon BubbleSnake Aerator
- (1) 714 or 1110 GPH pump
- (1) 3' piece of clear air hose
- (1) Clamp
- (1) Wallace WOW Logo Sticker for your bucket

Step 1

Building your WOW Wonder Brewer

Check to see that your parts are clean and free of debris

- Attach the 2 pieces of BubbleSnake aerator together.
- Attach 3/16" clear air hose to the air pump.
- Place aerator in bucket and clamp to bucket **keeping Aerator 1 inch off the bottom of the bucket.**
- Add 5 or 25 gallons (non-chlorinated) warm water to the bucket (note: water temperature should be between 60°F and 70°F for best results. This helps to wake up the microbes). If using chlorinated water, plug in water pump and let aerate for 30 minutes before adding compost tea bag and activator packet. Each 80 gram Wonder Brew will make 5 gallons of tea, 500 gram Wonder Brew makes 25 gallons of tea. To make more tea simply double the amount of tea bags and activator packets added to your water. The small BubbleSnake and pump can make up to 10 gallons of tea. The large one can make up to 50 gallons of tea.
- Plug in air pump to 120 volt power source.
- Place the WOW Logo Sticker on the bucket.

Step 2

Using your WOW Wonder Brewer

- Open 1 activator packet and add contents to water along with 1 Compost tea bag.
- Brewing times based on ambient air temperature.
- 60° or warmer water = 24 hours for compost tea
- 59° or colder water = 48 hours for compost tea
- For best results use your Wonder Brew within 12 to 24 hours after brewing. Wonder Brew may be refrigerated for up to 72 hours.

Step 3

Applying WOW Wonder Brew

In-Ground plants and raised beds:

- Apply 1 to 2 cups of brewed Wonder Brew as a root drench around the base of established plants once a week throughout all stages of plant growth. Follow with regular watering to work tea down to the root zone.

Potted plants:

Apply brewed Wonder Brew weekly as a root drench around the base of each plant.

- 1-3 gallon container – apply 1-2 cups
- 5-7 gallon container – apply 3-4 cups
- 10-20 gallon container – apply 5-8 cups
- 25-50 gallon container – apply ½ gallon – 1 gallon
- 100 gallon container – apply 2-3 gallons

WOW Wonder Brew may be diluted 1:10 (1 gallon of Wonder Brew for every 10 gallons of water)

Hydroponics & Irrigation:

Hydroponics & Irrigation: Use Wonder Brew 24 hours before changing reservoir. Add Wonder Brew at the rate of 1-2 gallons for every 10 gallons of nutrient solutions. Use Wonder Brew weekly throughout the growing season.
