the automotive **electrical** component specialist

product

The latest in LED technology and functionality has been developed to provide a versatile bus stopping light that maintains traditional expectations with slim line contemporary design enhancements and state-of-the-art LED lighting advances.

design features

- Unique super bright LED development has significantly reduced the wattage required minimising power usage whilst maximising brightness and visibility.
- The unit benefits from fit and forget long life LED's with no maintenance required.
- The unit uses LED's to backlight words enabling your specific message to be communicated. The words you choose will only be visible when the unit is illuminated.
- The unit is slim line and versatile, manufactured from high spec thermoplastic material with a high gloss tinted outer cover.
- Flexible design to fix with either a permanent high hold adhesive strip or screws.
- The LED's are designed to protect against reverse polarity connection.
- DDA standards are attained
- Available as a 12V or 24V unit

technical information

- Cover is high gloss tinted acrylic copolymer thermoplastic
- Base is in ABS material
