Yellow-Green Micro Light for the Dioramo Lighting System

Note: Yellow-Green LEDs emit lower intensity light.

INFORMATION

THE SMALLEST OF THEM ALL

MICRO LIGHT

- Micro Lights are small, delicate lights. Handle with care to increase dependability.
- Features the tiny 0402 SMD Chip LED.
- Measures only 1mm long by 0.5mm wide, making it unnoticeable to most when the Light is turned off.
- Shines Bright in Small Spaces.
- Available in a Full Spectrum of Light Colors.
- 0402 SMD Chip LEDs are extremely challenging to solder, making these Prewired versions a possibility for many.
- Beware of cheap imitations using thicker solid core wiring, which is not optimal for miniatures, small models, and other precision installations.
- Our Micro Lights are Prewired with 1 foot of Fine 36 AWG Stranded "Micro Litz" Wire, followed by an additional 3 feet of our Premium Ultra-Flexible 30 AWG Soft Silicone Wire (#32001), allowing for friendly and discreet cable management.

Model making product. This is not a toy!
Not suitable for children under 14 years.

TECHNICAL DETAILS

Light Color		Yellow-Green / Chartreuse
Wavelength		570 - 572 nm (nanometers)
Brightness		36-43 mcd (millicandela)
Viewing Angle		120° (degrees)
Light Effect		Static / Always On
Supply Voltage		0-12 Volts DC (resistor prewired in-line)
Current Draw		0-20 mA
LED Component		Available separately as Dioramo #10208

JST XH-2 Plug
