

AmniTec manufacture a comprehensive range of polygonal and round section double overlap Stripwound hose, available with or without packing. The product is available in Stainless or Galvanised steel, depending on temperature, corrosion resistance, service life and cost factors. Our Polylock and Interlock designs are manufactured in accordance with BS EN ISO 15465:2004, and will accept axial and bending movement. They are typically used in exhaust applications, for cable armouring and conduit, and for the transfer of granular materials such as grain, flour and ash. As a pressure hose, common applications include tar and bitumen transfer. Common bore sizes shown below. Intermediate sizes are available on request.

Polylock Section

Interlock Section (with packing)

Polylock Hose							
Bore Size		Amnitec Ref	Material	OD Ref (mm)	Bend Radius (mm)	Weight (Kg/m)	Max Length (m)
