Our experienced custom pin designers will be glad to assist you in choosing the best styles for your pin.

How do we make a die struck pin?

1. Your design or logo is engraved into a tool (die).
2. The die is then stamped into high quality metal to make an impression of your logo.
3. If your pin is to be enameled, it is at this point that we fill the recessed areas with liquid enamel.
4. Based on your preference, these thin walls are later plated in a color of your choosing.

Frequently asked questions

Q. How many colors can my pin have?

A. Unlimited, you can have as many colors as you like.

Q. How long will my pins take to make?

A. Standard production time is 4 weeks.

Q. I don't have art. Can you help me?

A. Yes, we have a full service creative department with years of experience helping customers design their pins.

Q. Can you make a sample pin before I finalize my order?

A. Yes, a pre-production sample is available. Please ask for details.

HARD ENAMEL on a die struck emblem

An ancient Chinese art, developed over 6000 years ago, Hard Enamel has a brilliant and refined look. Run your fingers over these pins and you will feel a smooth glass-like surface as the color is raised to the level of the metal. These pins are highly durable with a jewelry-like finish that will not scratch. Specific colors can be matched using the Pantone (PMS) color matching system.

EMBOSSSED SOFT ENAMEL on a die struck emblem

Similar to Hard Enamel, Soft Enamel is recessed into the pin. As you run your finger over these pins you will feel a definite raised and lowered effect. Although very durable, the colored enamel is softer and less scratch resistant than Hard Enamel. Specific colors can be matched using the Pantone (PMS) color matching system.

A high-quality, lower cost alternative to Hard Enamel.

DIE STRUCK no color

For a rich metal look without color, Die Struck is your best choice. The raised areas are highly polished to a brilliant luster. The recessed areas are sandblasted or textured to create an appealing contrast. These pins can also be antiqued (darkened) for a vintage effect.

PVC

For a fun, three-dimensional rendition of your logo or design, you may want to consider custom designed PVC lapel pins. PVC lapel pins are made with a versatile process that can create flat, 2D, 3D or even a full relief of your chosen design or logo. In addition to standard PMS colors, we offer PVC pins that are transparent, neon, sparkling, and even glow in the dark!

Check out our PVC sample for a glow in the dark option.

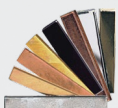

PRINTED

Choose printed pins for designs requiring fine lines and detail. Your design is reproduced digitally and then printed directly on to the metal. An epoxy dome is added for protection. This process is perfect for photos, gradient colors or shading.

Perfect for photographic or continuous tone art.

CAST

For an exciting 3D look, choose a Cast Pin. From your design we create tooling that enables us to provide a sculpted effect. Once your basic piece is created, we are able to plate it in gold, silver or any of the platings we offer including antique plating.

Metal pins are available in a variety of platings, including gold, silver, bronze, and black nickel.
