

HQD10 Variable Speed Full Feature

Features & Benefits

- Genuine 10HP Variable speed motor
- Accessible service panels
- Control panel with intelligent touch screen display
- Automatic fault finding and recording
- Super quiet running noise at 66dB(a)
- Power saving motor - only works as hard as you need it
- High quality electrical components
- Australian owned & local manufacturer
- You can get direct energy savings of 5 – 35% using variable speed compressors
- Power consumption will match the air being used
- Ability to start and stop under load
- Stable pressure without fluctuations
- Avoid peak currents during start up

Product Description

Peerless Products Variable Speed Rotary Screw Compressors are here to save you money!

Most air compressors run continuously even when you're not using the air. This machine will perform to your requirements and save you money at the same time by only doing the work that you want it to do!

Our HQD Variable Speed Compressors will reduce your power consumption and give you a quick return on your investment within no time. With a great output of 1000 Litres per minute at 8 Bar this compressor is designed for 6 - 8 person workshops easily keeping up with high demand.

For ease of use it features an LED touchscreen control panel allows the user to easily operate

and view the functionality of the air compressor along with viewing service times which are based on run hours. Operating pressure can be viewed in MPA or PSI along with the ability to view energy consumption.

The Full Feature unit comes complete with a refrigeration air dryer and a 200L air receiver. This makes installation extremely easy as everything is already fitted and ready to go - just need your electrician to wire the unit in!

Need Clean & Dry air?

As a compressor draws in air to compress it is also drawing in all the moisture that is in the surrounding environment. If this moisture enters your airlines it can cause issues within your compressor and also in the equipment you are using, causing your seals to swell and also rust to develop.

The best and most effective solution to prevent this happening is to employ an Air Dryer in your set up. Dryers are designed to remove any moisture before it enters your airlines and causing issues that will soon become a major and potentially very expensive problem.

Peerless branded filters have been specifically developed for high efficient removal of solid particles, water, oil aerosols, hydrocarbons, odour and vapours from compressed air systems.

To meet the required air quality, the appropriate filter must be selected.

Refrigeration Dryer to suit;

- WB7.5D Refrigeration Dryer

Filtration to suit;

- PREF0078, POSTF0078 & OSEPF0078

350KG

WARRANTY
1 YEAR TOTAL UNIT

1690 x 560 x 1450 MM

WORKSHOP SIZE

Peerless Variable Speed Rotary Screw Compressors

Peerless Products Variable Speed Rotary Screw Compressors are here to save you money!

Variable speed means if you're using less pressure and volume than what is set the compressor will calculate and slow down to the output required. Variable speed compressors are able to maintain a constant pressure allowing you to preset it to have a lower pressure (1bar = 5% energy savings). With the motors high efficiency for lower HP consumption, the speed regulation of a minimum and maximum speed, plays a huge part in energy savings. The energy savings from this design are practically putting money back in your pocket!

Air dryers are available to suit each model and you have the flexibility of choosing a tank which will best suit your individual needs in terms of capacity and overall size.

Ease of servicing also makes this unit very attractive. All main componentry have easy access panels along with our basic service guide so you or your local service agent can service without any issues.

For help sizing up what compressor will best suit your application speak to a Peerless Specialist.

ENERGY SAVINGS!

Variable Speed at a glance!

- On average 70% of a compressors cost is energy
- You can get direct energy savings of 5 – 35% using variable speed compressors
- Power consumption will match the air being used (**see right**)
- Ability to start and stop under load
- Stable pressure without fluctuations
- Avoid peak currents during start up

Energy Consumption with Air Demand
