PROFILE:**
Heritage Cast Aluminium
125mm Victorian Ogee
guttering
and
63mm circular downpipe

FINISH:
BAA approved
factory applied
RAL1013 Pearl White
powder coated

JOB SPECIFIC DETAILS & SCOPE OF WORKS

This house on Slipper Lane was in a conservation area and the property owner undertaking the sympathetic renovation and installation of the guttering and downpipes himself, wanted them to be in keeping with the aesthetics of properties in the surrounding area.

After speaking to the dedicated customer service team, Heritage Cast Aluminium was the obvious choice due to its traditional features, including cast collared downpipes and 6ft gutter lengths.

The high performance factory applied BBA certified powder coating systems was another key factor, finished in pearl white, the product was delivered to site ready to install, significantly reducing the usual downtime associated with onsite painting and cutting installation time too.

We have a range of 26 standard colours available at no extra cost and other RAL or BS colours can be matched but are subject to surcharge depending on project value.

The Heritage Cast Aluminium range is usually installed by professional builder or contractor, but with the help of installation guides and an experienced customer service team, the property owner was able to install himself.

The owner made use of the free 'take off' service, creating a list of materials from drawings and providing a competitive quote quickly, without the owner having the inconvenience of completing a full measure of the property for himself.
