

"Elevating Spaces: Lamet's Oak Wall Slat"

New Case Study

Objective:

To create a welcoming and sophisticated reception area for a private hospital incorporating Lamet's oak wall slats, radius panels, and flat wall panels into various sections of the space.

In an orchestrated effort to redefine the ambiance and functionality of a private hospital's reception area, we opted for Lamet's high-quality oak wall slats as the cornerstone of the redesign. This endeavor was not just a matter of installing pre-made pieces; it involved the intricate manufacture of bespoke oak wall slats, as well as radius and flat wall panels specifically tailored to the space. The customised design elements were developed in close collaboration with the hospital's in-house design team to ensure that each feature would serve both aesthetic and practical purposes. Additionally, Lamet's laminated metal channels were used, providing a realistic and luxurious look that elevates the overall design. These thoughtful integrations served to harmonise the various sections of the reception area, creating a unified, inviting, and modern environment. The end result offers an enhanced experience for visitors while aligning perfectly with the hospital's vision of combining elegance with innovation.

Challenging the Conventional Reception Design

The objective was clear, yet a unique challenge presented itself: the requirement for a radius assembly. The curvature of the space demanded a precise fit that was seamlessly achieved due to Lamet's precision manufacturing process. The resulting assembly on a radius proved to be a showcase of the product's adaptability and precision.

Strategically Placed Wall Slats

Six reception booths were transformed using Lamet's oak wall slats on their exterior surfaces. The 20mm width of each slat, coupled with a 15mm spacing, contributed to an intriguing interplay of light and shadow across the booth exteriors, giving the space an engaging visual texture.

Additionally, the walkway leading to the booth area was adorned with the same oak wall slats. The continuity of the design from the reception booths to the walkway created a cohesive and immersive experience for visitors.

Bespoke Manufacturing for Precision

To ensure a perfect fit and a seamless look, the oak wall slats were meticulously crafted in the UK with a height of 2400mm. The bespoke manufacturing allowed for the assembly of the slats on a gentle radius, accommodating the unique curvature of the space. This attention to detail not only added to the aesthetic appeal but also showcased the precision that Lamet's products are known for.

Waterproof Advantage for Easy Cleaning

The pro of waterproof properties was a boon for a high-traffic area like a hospital reception. The wall slats not only enhanced the visual appeal but also made cleaning and maintenance a breeze, contributing to a hygienic and welcoming environment.

Manufacturing Steps Made Simple:

To achieve an innovative and sophisticated reception area featuring two radius panels, several flat panels, and over 100 wall slat channels, we took several key steps in the manufacturing process. Firstly, our team collaborated closely with the hospital's design staff during the planning phase to determine the ideal locations for these elements. Next, prototypes were developed and rigorously reviewed for approval. Once approved, we manufactured the radius panels and wall slat channels to exact specifications, ensuring that each piece would fit flawlessly within the designated spaces. Rigorous quality checks were performed post-manufacturing to guarantee a perfect finish. The end result was a set of expertly crafted design elements that perfectly align with Lamet's commitment to quality and innovation.

Testimonial:

“The incorporation of Lamet's oak wall slats has elevated our hospital's reception area to a new level. The combination of aesthetics and functionality is truly remarkable. Our visitors are captivated by the elegant design, and the ambiance created is serene and inviting. Lamet's attention to detail and commitment to excellence is evident in every aspect of their product. We're thrilled with the transformation they've brought to our space. I may even choose one of their metallic range in a couple of years.”

Thank you - R P
