## **Preschool Behavior Assessment Rubric**

Soon after administering the assessment, circle the appropriate box for each domain.

| Damain                     | Score   |   |  |   |  |
|----------------------------|---|---|--|---|--|
| Domain                     | 1   | 2   | 3  | 4   |  |
| Attention                  | Mostly off-task,<br>inattentive   | Attention frequently drifts; requires frequent prompts                  | Attention <i>occasionally</i> drifts; responsive to prompts                          | Attends closely without prompting                                     |  |
| Engagement                 | Will not engage;<br>seems 'shut down'   | Repeatedly withdraws<br>and needs<br>encouragement to<br>complete tasks | Generally interacts but occasionally lowers head, turns away, or takes a 'break'     | Participatory;<br>relaxed body<br>posture                             |  |
| Cooperation                | Defiantly refuses to comply or completely withdraws                               | Complies after repeated prompts; may test limits or ignore adult        | Says no but then<br>complies or may be<br>slow in complying                          | Responds as<br>requested; no<br>prompting or delay                    |  |
| Positivity                 | Makes many negative comments  | Neutral when doing something correctly                                  | Slightly pleased in completing tasks   | Happy or excited about completing tasks                               |  |
| Precision                  | Rowdy; Haphazard;<br>Breaks/damages<br>materials                                  | Rowdy and careless at<br>times; may slightly<br>damage materials        | Generally careful but<br>may slightly damage<br>materials; Interested in<br>accuracy | Takes great care;<br>precise  |  |
| Control of<br>Movement     | Impulsive<br>movements require<br>constant boundary<br>setting                    | Impulsive movements require <i>regular</i> boundary setting             | A few impulsive<br>movements; may or<br>may not need boundary<br>setting             | No impulsive<br>movements   |  |
| Arousal                    | Overwhelming emotions (sad, silly, frustrated); difficulty regaining self-control | Very emotional but able<br>to calm/stabilize with<br>support            | Briefly emotional but calms/stabilizes quickly                                       | Calm and steady   |  |
| Persistence/<br>Confidence | Not able to continue past difficulty; Won't begin                                 | Continues past difficulty with a lot of encouragement; seeks validation | Continues past difficulty with some encouragement                                    | Continues past<br>difficulty<br>independently or<br>has no difficulty |  |
| Flexibility                | Refuses to switch to<br>a new task  | Resists switching; argues or uses stall tactics                         | Mild complaint or delay<br>when asked to switch<br>tasks                             | Switches easily to<br>new task  |  |
