

Safety First

- parents can safely look forward and focus on the children and the traffic in front of them
- large & deep protective box made of strong steel, alloy or wood with 5-point harnesses for each child
- very low centre of gravity due to the cargo being low to the ground, resulting in the best stability
- easily talk to each other, not having to look back over your shoulder
- very stable mid-mounted stand so your children can climb on the bike without it tipping over

Fun

- children in front of you for direct easy fun communication
- while riding you are all seeing the same scenery during the ride
- discuss, sing songs, laugh
- enjoy outdoor life with your family

Convenience

- ready for children from 1 month to 12 years, without having to change over accessories all the time
- plenty of easy storage space in the front for up to 100kg including easy space for larger items or shopping
- your children will become confident bike riders so you don't have to ferry them around all day any more
- some models can safely transport 2-3-4 children in the front

Comfort

- smooth riding characteristics due to the cargo being in between the front and the rear wheel
- very suitable for longer distances

Brain Development

- children are trained to become confident bike riders
- children learn about traffic because they can see the parents do it
- it's scientifically proven that fresh air increases cognitive performance and school results
- connect with the environment, neighborhood, other people
