1 Introduction
2 About Devoción
3 About our Sustainability Program 2026
4 Strategy
5 Monitoring and Evaluation
STATEMENT FROM THE CEO OF DEVOCIÓN

Our mission is simple: transport our customers to origin through our freshness and coffee experience. At the same time, we strive to protect the land from which our coffee grows as it is the lifeblood of our company, while improving the lives of those with whom we work and the communities in which they live. In actuality, we are in the people business. By creating a network of independent coffee farmers throughout Colombia's coffee producing regions, we are able to build direct relationships with our suppliers that go above and beyond a traditional business transaction, allowing us to intimately understand their needs in producing the best product possible. With the longevity of both our company and that of our partners in mind, Devoción has committed to a thoughtful Sustainability Strategy that will lead the company, our employees, our vendors and our producing partners in an effort to generate a positive impact on the environment, our communities and each other with everything we do.
Devoción’s Sustainability Strategy is comprised of three core pillars: Social, Environmental, and Economic.

Socially, we are working towards strengthening internal programs for employee wellness and work safety. To that end, we have created a wellness plan that encourages the personal and professional development of our staff members in Colombia. We are also committed to guaranteeing a healthy work environment, free of accidents, and most importantly, one where our personnel feel respected and comfortable in their jobs.

Environmentally, we are committed to minimizing the environmental impact resulting from our global operations. As such, we have developed a system to measure our direct and indirect impact in order to considerably reduce our environmental footprint. Measures taken include the use of renewable energy sources and environmentally-friendly fuels, forming partnerships to create a circular economy, implementing the use of composting, and using recyclable/biodegradable materials where possible. We don’t only hold ourselves to that standard, but our partners as well. We are working to ensure our supply chain meets the environmental standards we have set. In addition to our efforts at home, we aim to protect and support the biodiverse, coffee-producing lands on which we so heavily rely. We promote conservation, teach sustainable farming practices and reinvest in the communities to sustain their lands.

Economically, our intent is to grow our sales and profits, while maintaining a fair business model that generates a win-win-win for the company, society and the environment. In the process of continuing to integrate sustainability as a criterion in decision-making, we are building greater awareness among the Devoción team and throughout our value chain. Outside of the company, we are committed to supporting social projects in the local communities in which we work. We have created a “Women in Coffee” program highlighting independent female coffee producers, funded education initiatives at local schools and provided coffee farming training to those in need. We pay our farmers above fair-trade prices, ensuring a livelihood. Our educational efforts, both in local schools and on the farms, will have positive effects across generations.
We are well aware of the challenges such as climate change, fluctuating coffee prices, the migration of new generations from the countryside to the cities, and the political and economic situation in Colombia, the United States and the rest of the world. As a company, we believe that the success of our business and its long-term viability depends on the well-being of our stakeholders, the responsible use of natural resources and the protection of the biodiversity of coffee-growing lands. We are very proud to share our Sustainability Report 2026, a guide to our continued improvement and social responsibility for the next several years.

Steven Sutton
CEO
ABOUT DEVOCIÓN

Founded by Steven Sutton in 2006 in an effort to elevate the Colombian coffee experience, Café Devotion SAS is the parent company of three iconic brands—Devoción, Veneto Café and Rancilio Colombia—that represent the most outstanding aspects of the Colombian coffee industry, including both specialty and mass market coffees, as well as the most reliable coffee equipment on the market.

Operating in Colombia and the United States, Devoción has led the fourth-wave coffee movement in both countries for the last decade. First sourcing the highest quality coffee throughout Colombia from a network of independent smallholder farmers, the beans are transported to a processing plant in Bogotá before either being roasted on site for local distribution or shipped via FedEx to the U.S., where they are then roasted in the company’s Williamsburg flagship café and roastery upon arrival to ensure maximum freshness. In addition to the original Williamsburg location, Devoción operates two other cafés, one in Manhattan’s Flatiron neighborhood and one in Downtown Brooklyn. No matter the location, customers are treated to the “freshest coffee in the United States.”

Upon its founding, Devoción was, and still remains, a pioneer of the specialty coffee industry in Colombia. The infrastructure the company has created allows it to continue to deliver the freshest coffee in both Colombia and the United States, going from farm to cup in as little as 10 days.

At our core, we are explorers. We travel year-round throughout Colombia looking for the finest quality beans, only purchasing coffee from regions in active harvest (or “regions that are currently harvesting coffee at the time of sourcing”) and never using warehoused beans or third-party importers to guarantee that 100% of our coffees are roasted while still fresh. Our constant expeditions allow us to take a hands-on approach to coffee buying in which we can build and develop strong relationships with the communities we source from. We understand the connection between people and coffee, and are passionate about elevating the experience of this daily ritual. Our focus is quality and freshness, while always considering the sustainability of the product and its value chain.
COMPANY HIGHLIGHTS

MISSION

Transport our customers to origin through our freshness and coffee experience.

VISION

Establish ourselves as the freshest and most authentic coffee, while maintaining our commitment to improving lives and protecting the origin.

VALUES

Integrity
We are honest, committed, and responsible. We respect differences and show solidarity with one another.

Continuous Improvement
We foster continuous growth by learning with each other.

Devotion
We take on each task with passion, love, and dedication.

Distributed in more than 400 points-of-sale worldwide

50% of our management positions are held by women

+120 hours of employee volunteering in educational projects

Organic coffee sourced from more than 200 USDA-certified organic farms

Purchase coffee above fair-trade prices significantly benefiting coffee producers
ABOUT OUR SUSTAINABILITY PROGRAM 2026

Devoción publicly affirms its commitment to transforming into a fully socially and environmentally responsible company. This program includes the sustainability strategy until 2026 focused on the three pillars of sustainability corresponding to the social, environmental and economic impact of all aspects of the business.

An annual review cycle of the sustainability program and a two-year follow-up of the materiality assessment have been established in such a way to permanently monitor compliance with goals and strategies.

This published program is readily available on our web site in Colombia and in the United States, so that interested parties may follow all the challenges and advances in sustainability that Devoción intends to take on in the short and medium term.

The organization is available to any interested party wishing to offer suggestions or requesting clarification of any of the posted information by sending an email to contact@devocion.com
THE PRINCIPLES OF THIS PROGRAM

PRINCIPLE OF INFORMATIONAL TRANSPARENCY AND ACCURACY

Informational transparency, one of Devoción’s core principles as declared in its code of ethics, is essential for ensuring the credibility of the message that Devoción communicates to all its stakeholders.

The organization prepares and maintains records that make it possible to compare and establish the traceability and reliability of all the data provided in this program through performance indicators.

PRINCIPLE OF INCLUSIVITY

In the spirit of this report’s very ethos, it is imperative to take into account all of the relevant stakeholders impacted by Devoción’s operations from coffee producers to vendors and customers. Surveys were conducted to adequately source input and insight from all those in the Devoción ecosystem to develop the materiality assessment and identify needs and expectations going forward.
PRINCIPLE OF RELEVANCE

The materiality assessment prepared by Devoción in 2021, under the guidelines established in the G4 guide for the Preparation of Sustainability Reports of the Global Reporting Initiative, has allowed the organization to identify the social, economical and environmental issues with the greatest impact. As a result of this analysis, Devoción considers that the information collected in this program is relevant for the company and its various stakeholders.

PRINCIPLE OF RESPONSIVENESS

The company addresses the main sustainability issues that concern its stakeholders. This program establishes the policies, objectives and actions to be developed through 2026 in the following pillars:

- Well-being of our employees
- Commitment to the planet
- Generating a positive social and economic impact throughout our value chain.

The objectives of the program are measurable and assessable.
PROGRAM SCOPE

This program covers the entirety of Devoción’s business activity conducted in both Colombia and the United States. The content of this program follows the guidelines set by the GRI Standards of the Global Reporting Initiative (GRI) reflecting the company’s strategy to achieve a better tomorrow, while managing expectations of the various stakeholders throughout the company’s operation.

IMPACTS AND OPPORTUNITIES

The desired effects resulting from this program fall into three categories related to sustainability: economic impact, environmental impact and social impact.

Social Impact

We managed to maintain the majority of our workforce in 2020 and 2021 throughout the pandemic, all the while continuing to promote their well-being through various programs including a comprehensive training program that allows them to reinforce their current capabilities and acquire new knowledge in other areas.
Environmental Impact

We have identified where we generate significant environmental impact, allowing us to manage resources more efficiently and improve environmental management throughout our operations.

Economic Impact

The pandemic brought with it many changes and challenges. However, it also presented us with an opportunity to fortify our strategy and direct our focus towards the development of new products, entry into new markets, and towards responsible and sustainable growth. Additionally, during the pandemic, we managed to continue our education initiatives for the coffee community virtually, allowing us to maintain and fulfill our commitment to them.
MATERIALITY ANALYSIS

Devocion presents its materiality assessment conducted with its stakeholders in Colombia and the United States to identify trends in sustainability that might have the greatest impact on, and generate value for, the company in the short- and medium-term. The assessment will be updated every two years. Devocion is aware of the importance of establishing relationships of trust with its stakeholders ensuring success for all involved. The company has implemented two methodologies that allow us to identify their needs and expectations:

INTERNALLY

The management and leaders of the organization’s processes, both in Colombia and in the United States, identified the needs and expectations of each of their respective stakeholders creating actionable items to follow-up in the immediate and long-term.

EXTERNALLY

The sustainability team has conducted both virtual and in-person surveys focusing on social and environmental aspects that allow the company to understand and evaluate the current status of all suppliers in order to incorporate corporate social responsibility protocols into their commercial activities.
Devoción presents its materiality assessment conducted with its stakeholders in Colombia and the United States to identify, and generate value for, the company in the short- and medium-term. The assessment will be updated every two years.

**STAKEHOLDERS**

Stakeholders are fundamental to Devoción’s sustainability strategy. They were selected according to their impact upon company operations.
METHODOLOGY

1. IDENTIFICATION OF MATERIAL ISSUES

The materiality assessment is conducted with the assistance of the Devoción sustainability team in Colombia and the United States in order to identify specific issues for each organizational activity. This methodology has been applied according to the recommendations made by the guide for preparing GRI - G4 sustainability reports.

The analysis was made using information gathered from surveys conducted with various stakeholders in order to identify the areas of social and environmental importance for each. This structure allows us to hone in on the nuances and specificities that form the Sustainability Program 2026.

To identify material issues, the following actions were conducted:

A survey was administered to coffee producers as key stakeholders and suppliers of Devoción’s primary raw materials. For this, members of the sustainability team traveled to farms and conducted interviews to gather information about the access to basic services and education, waste management, water use and management, as well as the use and management of energy and materials.
A virtual survey was also sent to additional service providers in both Colombia and the United States where each was asked to identify their social, economical and environmental priorities.

A third survey was administered to Devoción’s staff in Colombia and the United States in order to identify their priorities and goals related to the materiality assessment. Finally, the needs and expectations of senior management were analyzed through tools such as SWOT and meetings with the sustainability team. All individual results were then consolidated, reviewed and analyzed by the sustainability team.
2. PRIORITIZATION OF MATERIAL ISSUES

The prioritization of issues was determined based on an analysis of the following sources of information:

EXTERNAL RELEVANCE AS RECOGNIZED BY EXTERNAL ORGANIZATIONS

- Criteria and priority aspects identified by the National Federation of Coffee Producers of Colombia (FNC)

- Consultation of international organizations and sector institutions: Cenicafé, International Coffee Organization (ICO), and reports on sustainable methodology conducted by the Colombian National Business Association (ANDI)

INTERNAL RELEVANCE, BASED ON THE IDENTIFICATION OF TRENDS THAT AFFECT BUSINESSES

- Analysis of internal and external context
- Analysis of needs and expectations of stakeholders
- Consultations with the sustainability team: the members of the committee provided their views on the relevance of a selection of issues.
3. VALIDATION OF MATERIAL ISSUES

For the assessment and validation of the identified material issues, a series of meetings were held with the Devocion sustainability team in which the assessments agreed upon in the previous phase were ratified through deliberation.

RESULTS

The material aspects identified for Devocion in Colombia and the United States are detailed below. For the preparation of the materiality matrix, the list of relevant issues was based on the surveys and interviews conducted with the stakeholders and prioritized following the methodology indicated above.
The final result of the process is a materiality matrix in which each of the relevant topics identified is classified based on two variables: importance for the stakeholders and importance for the business.

The materiality issues analyzed are the following:

- Environmental Education
- Waste Management
- Social Projects
- Economic Performance
- Water Conservation
- Digitalisation

- Human Rights
- Labor Conditions
- Energy Management and Carbon Footprint
- Employee Well-Being
- Commitment to the Planet
- Generating a Positive Social and Economic Impact through our Value Chain

IMPORTANCE FOR THE STAKEHOLDERS
STRATEGY

As a result of the materiality assessment, we have identified three strategic categories that cover all the issues identified as the most important for our stakeholders and that represent the basis of our strategy through 2026:

THE WELL-BEING OF OUR EMPLOYEES

Our goal is to promote the well-being of our employees by ensuring a safe and inclusive work environment. We promote their personal and professional development through cross-functional and soft-skills training programs.

COMMITMENT TO THE PLANET

We strive to improve the environmental management of our operations through innovation and campaigns that encourage the efficient use of resources. We aim to use renewable energy whenever feasible and promote a circular economy, reducing waste generated substantially.

GENERATING A POSITIVE SOCIAL AND ECONOMIC IMPACT THROUGH OUR VALUE CHAINS

We seek to include sustainability criteria throughout our value chain, starting with the way suppliers are selected. We are dedicated to promoting responsible consumption at the local level and the execution of social projects that positively impact the community, all the while maintaining our standards of ethics and business responsibility.

We assigned a series of metrics for each strategic axis that will allow us to measure the performance of our strategy and the impact of the initiatives we plan to implement to achieve our objectives. A measurement system was implemented within the company that monitors the effectiveness of the strategy in both the United States and Colombia biannually.
THE WELL-BEING OF OUR EMPLOYEES

Devoción’s most important asset is its employees. Our commitment is to ensure a safe working environment where every employee feels free of mistreatment, discrimination and harassment, and above all, feels respected. We pride ourselves on being an organization characterized by equality, fair pay, and safe working conditions.

A collaborative and healthy environment is created to ensure the wellbeing of employees, allowing for a healthy balance between professional and personal lives. Comprehensive training programs and monitoring of safety measures maintain a reliable safe workplace.

OBJECTIVES

We are committed to facilitating injury-free work that promotes diversity, equity, and inclusion, and the development of our employees’ skills. As we strive for our staff to be strategic participants in our sustainability strategy, we are designing training programs to specifically address these issues.

ACTIONS

- Implement a training program to consolidate soft skills, learn how other departments work and increase awareness of issues such as diversity, equity, and inclusion.

- Maintain communication channels such as feedback and performance evaluations in which our workers feel heard and free to share and promote their ideas.

- Conduct surveys on working conditions, employment and worker health that allow us to collect key information in order to generate improvement strategies for issues such as training, physical, emotional and mental health, work/life balance, and communication.
• Generate a positive impact in the coffee community through volunteer activities.

• Adopt working conditions that allow more flexible forms of work that help workers balance their personal and professional lives.

EMPLOYEE WELFARE HIGHLIGHTS

• Created a statement of diversity, equity and inclusion, and will ensure that it is included in all job listings published.
• Created and implemented training programs that promote continuous improvement and personal growth. Some staff members have benefited from external training in specific areas that ensure the broadening of their knowledge.
• Issued year-end performance-based cash bonuses to reward employees.
• Implemented flexible working schedules.
• Continue to provide discounts to our staff for our products.
• Promote employee volunteer initiatives in coffee-growing communities and are currently exploring opportunities to expand these initiatives in the United States.

OUR DIVERSITY, EQUITY AND INCLUSION STATEMENT

We Celebrate Humanity

We stand for diversity, equity, and inclusion. It is woven into our values and philosophy to celebrate humanity in its full spectrum and treat each other with respect and appreciation.

As an equal opportunity employer, we welcome the unique contributions that everyone can bring to Devoción, and we don’t discriminate against an employee or applicant based on their race, color, sex, sexual orientation, gender identity and/or expression, age, national origin, religion, status as a veteran, and basis of disability or any other federal, state or local protected class.

We respect differences and firmly believe that we are stronger together.
COMMITMENT TO THE PLANET

Devoción’s commitment to the planet is organized into three categories that correspond to the company’s greatest environmental impacts: energy and emissions, water, and waste. We have defined metrics for each of these categories that reflect their performance, objectives, and strategies to achieve them.

To ensure compliance with all the environmental requirements specified in our management systems, we plan annual environmental audits to be conducted by outside firms. Devoción will monitor its environmental objectives annually, tracking specific benchmarks of the guidelines established by our sustainability team.

I. ENERGY AND EMISSIONS

Climate change is a reality and has been the most critical risk for countries, companies and communities in recent decades. Our measures to reduce greenhouse gas (GHG) emissions are intended to make a positive contribution to the fight against climate change through improvements in our production processes, in the energy used to operate our offices and cafés, and in the distribution of our product from Colombia to the United States.
OBJECTIVES

We are committed to reducing our greenhouse gas emissions by 21%, with the emissions recorded in 2021 as the baseline. To define our reduction goals, we have employed the methodology proposed by the Science Based Target initiative using the corresponding scenario of 1.5 degrees Celsius.

Additionally, we promise that 100% of our cafés use electricity produced from renewable sources.

ACTIONS

- Improve the process of measuring our environmental footprint to define a baseline.
- Implement campaigns that promote the efficient use of fuel and electricity.
- Replace inefficient equipment with equipment that is more efficient or that eliminates the use of electricity.
- Continue utilizing exclusively renewable energy sources in our current cafés and in all future cafés.

2. WATER

One of the greatest threats facing humanity is the scarcity of fresh water. It is estimated that this will have a considerable impact on more than half of the world's population, in addition to being one of the concerns for food security. Based on this premise, Devoción aims to conserve this valuable resource by implementing protocols for saving water and using it efficiently.

We are committed to monitoring our water consumption, establishing best practices to improve the efficiency of its use, and taking all measures leading to a smaller water footprint.
OBJECTIVES

In 2021, we defined the baseline corresponding to our water footprint and based on the trends identified in 2022, we are committed to defining our reduction of water consumption goal based on the indicator of liters of water used per kilogram of coffee sold.

ACTIONS

- Improve the process of measuring our water footprint.
- Implement awareness campaigns regarding the efficient use of water.
- Identify opportunities to reduce our water footprint.

3. WASTE

Our value chain plays an important role in the implementation of a model that favors a circular economy. The company’s objective is to withdraw the current linear model of “extract resources—manufacture—dispose” and replace it with an approach that eliminates the concept of waste, constantly recycling materials through the value chain for reuse. This, in turn, allows the use of less energy, resulting in the production of fewer emissions and the preservation of natural resources.

For Devoción, this pillar represents a challenge that requires a commitment from everyone to contribute to reducing the waste of resources. To do this, we will use design and innovation as tools for reducing the environmental impact of our processes and extending the life cycle of our product and supplies through a higher rate of recycling.
OBJECTIVES

We are committed to increasing the proportion of recycling and composting of our waste by 20% and increasing the percentage of recycled or biodegradable materials in our packaging.

ACTIONS

- Improve the process of measuring the amount of waste generated and of recyclable waste generated.
- Create alliances with outside entities that promote better use of waste and increasing recycling rates.
- Evaluate our production and distribution process to identify improvements in packaging and raw material options with less environmental impact.
- Implement awareness campaigns to promote the proper separation of waste and the efficient use of raw materials.

ENVIRONMENTAL HIGHLIGHTS

- Created a system to measure, monitor and evaluate the generation of waste and the consumption of energy and water in Colombia and the United States.
- Switched to renewable forms of energy for the electricity usage of all our cafés and offices in the United States.
- Conducted an evaluation of the design and the materials used for packaging and found opportunities to minimize the environmental impact.
- Current coffee packaging is composed of more than 80% recyclable material, however we are investigating options to utilize 100% recyclable or biodegradable material.
- Implemented the use of software that optimizes delivery routes to reduce the overall carbon footprint associated with transport and distribution.
GENERATING A POSITIVE SOCIAL AND ECONOMIC IMPACT THROUGH OUR VALUE CHAIN

Our coffee is consumed daily by thousands of people and we are proud of the trust that consumers place in our product. For this reason, we are committed to ensuring that the processes involved in producing and selling this coffee are sustainable, taking into account environmental and social risks.

OBJECTIVES

We aim to generate a positive impact on the communities in which we work through the integration of sustainability criteria throughout our value chain by creating and enforcing policies and measurable goals that promote sustainable purchasing. Additionally, we are dedicated to creating and consolidating social projects that continue to improve the quality of life for the coffee community for generations to come.

ACTIONS

- Implement a monitoring and evaluation system for new suppliers that ensures the sustainability criteria described in our sustainable purchasing policy have been adhered to.

- Implement a monitoring and evaluation system that allows us to track how many of our suppliers of goods and services are aware of our suppliers' code of conduct and how many coffee producers have been informed of the same either verbally or in writing.

- Select the first group of suppliers that will be part of the on-site audit pilot program for sustainability issues.

- Buy (at least 50% of non-labor expenses) from local independent suppliers from areas where the product will be consumed or where the company operates.

- Have a client base of at least 75% local customers or local and independent customers.

- Reactivate social projects that were put on hold due to the pandemic and explore methodologies that allow us to measure their social impact.
VALUE CHAIN HIGHLIGHTS

SOCIAL PROJECTS

In recent years, our projects have generated a positive social and environmental impact in the communities with which we work through the following initiatives we have implemented:

COMPREHENSIVE EDUCATIONAL PROJECT FOR COFFEE PRODUCERS AND THEIR FAMILIES

We provide basic training for coffee producers to enhance their knowledge, improve the quality of their coffee and be able to sell their coffee at a higher price. Topics include, but are not limited to, harvesting, fermentation, drying and humidity, storage, leadership, and resilience. More than 150 people received the training through tablet computers. Seven leaders received certified training at Devoción’s facilities.

NEXT GENERATION COFFEE PRODUCERS

The objective of this project is for students to recover the sense of belonging to their lands, build their life projects, work for their regions and discover economic opportunities within their community. More than 400 students at three schools have taken part in the project.
KNOWLEDGE CENTER

Students, accompanied by their teachers, learn through hands-on practice how to brew specialty coffees, including different methods of preparation so that they may pass on this knowledge to their parents and others in their communities. Rooms were set aside in the schools for conducting these workshops. More than 40 workshops have been conducted in the last two years for approximately 300 students.

VOLUNTEERING AND TREE PLANTING

More than 1,200 trees have been donated and planted, involving the participation of 40 volunteers and benefiting more than 20 coffee producers and their families.

RESPONSIBLE BUSINESS

We drafted our code of conduct for suppliers and included new verification criteria for suppliers on sustainability issues.
MEASUREMENT AND EVALUATION

MEASUREMENT

To promote the implementation of the objectives of our sustainability program, we have created key indicators for each of the proposed objectives, putting in place the necessary equipment, systems and capacities.

REPORTING

We are committed to the report, and for this reason, assign the results of each of the objectives for review by Management, allowing us to take any pertinent corrective measures in cases where there are shown to be deviations from any of the set goals.

MONITORING

To monitor performance, the Devoción sustainability team is permanently monitoring the results of the indicators in Colombia and the United States.

The sustainability team is in charge of monitoring the consumption of water, fuel, electricity, and waste.
AT DEVOCIÓN, WE ARE COMMITTED TO THE PLANET

- We are aware of the effects of climate change and are committed to the planet, ensuring that our efforts to reduce our environmental footprint intersect with our business strategy.

- We strive to make a positive contribution in the fight against climate change through improvements in our production processes, the energy used to run our offices and cafés, and in the distribution of our products.

- We identified the three most important categories of our environmental footprint, and established both goals as well as a plan of action to accomplish them by 2026.
**WHAT ARE WE DOING?**

**Energy and Emissions**

We improved the process of measuring our environmental footprint.

We are promoting the efficient use of energy through awareness campaigns.

We are switching all of our cafés to renewable energy sources and ensuring that new cafés use renewable energy.

---

**Water**

We improved the process of measuring our water footprint.

We are promoting the efficient use of water through awareness campaigns.

We are working to identify opportunities to reduce our water consumption.

---

**OBJECTIVES 2026**

Reduce our greenhouse gas emissions by 21% based on the emissions recorded in 2021*

100% of our cafés will use electricity from renewable sources.

We are committed to defining a reduction goal for our water consumption by 2022 (based on the indicator liters of water consumed / kilograms of coffee sold).
**Wastes**

We are improving the process of measuring the amount of waste generated.

We are promoting proper waste separation and the efficient use of raw materials through awareness campaigns.

We are evaluating our processes to identify packaging improvements and raw material options with less environmental impact.

We are creating alliances with entities that promote better use of waste.

Increase the proportion of recycling and composting of our waste by 20%.

Increase the percentage of recycled material in our packaging.

*To define our emission reduction goal, we have applied the methodology proposed by the Science Based Target Initiative using the scenario corresponding to 1.5 degrees Celsius.*
