

# Static cling material datasheet

#### Overview

This super clear static cling material uses static only to stick to flat surfaces, making it easy to apply and remove.

It's suitable for sticking to smooth, non-porous surfaces, such as the inside of windows. It can last up to one year when used indoors and six months outdoors

#### Material highlights

- Waterproof
- UV resistant
- Printed onto clear PVC film
- High clarity
- Adhesive-free, sticks using static only
- Will stick to all smooth, flat, non-porous surfaces

- Suitable for outdoor & short-term indoor use
- Durable and resistant to sunlight, scratches, water, oils & chemicals
- Leaves no residue when removing
- Tear-proof

### Typical uses

This clear material is very versatile and suitable for many applications, such as:

- Removable window clings
- Shop window branding
- Windscreen stickers

- Vehicle fleet branding
- Machine labels
- Seasonal promotions

#### Material construction

The image below shows a cross-section of the material, along with details of each part of the material:

- O 140 GSM kraft backing paper
- O Clear gloss, 170 micron PVC film
- O 12-15 microns of ink + 12-15 microns of white ink

## Technical data

Adhesive:	NA, this material sticks with static only
Print material:	Clear, 170 micron, PVC
Over-laminate:	NA
Temperature range:	-20C to +50C
Colour:	Clear
Finish:	Gloss
Durability:	1 year
Adhesive strength:	NA, sticks with static only
