

Mini-WM12 Air Purifier

This product is manufactured using Needle Point Bi-Polar Ionization technology developed by IAIRE. The ionization module produces millions of +/- ions that replicate those commonly found in nature. The ions neutralize pathogens by robbing them of life-sustaining hydrogen and help keep the air in the space fresh, crisp and odor free. Additionally, they kill bacteria, mildew, mold, fungus, and neutralize viruses, including SARS-CoV-2. Needle Point Bi-Polar Ionization technology meets the UL 2998 Ozone-Free standard, so it is safe to operate continuously in occupied spaces.

Specifications: Housing – High Density Polyurethane encloser w/plastic grills

Size – 5.25” W X 8” L X 2.25” H

Power – 12V

Air Volume – 114 CFM

Speed - 3000 RPM

Filter – None

Purification – Needle Point Bi-Polar Ionization

Warranty – 1-year limited warranty (877) 624-3247

Operation:

Mount unit on wall with plenty of room to allow adequate air to circulate around the unit. Keep unit away from water and wire into an appropriate 12-volt source. Ion unit light inside of unit should be lit green when unit is switched on with fan running, switch will light blue.

Maintenance: Switch unit off before performing any cleaning. Ion unit installed internally needs to have the brushes cleaned by air blast or with provided brush as they become dirty.

Installation: Drill minimum ¼” dia. hole in wall/ceiling where unit will mount. Run wiring lead thru hole, use appropriate connectors and supply line to 12V supply source. Pre-drill for screw mount and install screws thru unit mount holes. (Connectors, supply line and screws not included)
