

ANATOMY

HOW AVURA WORKS

INTERNAL OXIDATION

1. Creates polarized ozone (O_3) molecules out of ambient air using the same electrical process that creates lighting, but on a much smaller scale.

KILLS ON CONTACT

2. Releases ozone that breaks down odor, bacteria, viruses and other pathogens at the molecular level.

PURE OXYGEN

3. Leaves behind only enriched oxygen (O_2) as a naturally occurring byproduct for a safe, clean environment. No residue, harsh chemicals or debris.
