JET AGITATOR and VOLUME BOOSTER MODEL 3371-0019

The versatile Hypro, venturi type, 3371-0019 Jet Agitator adapts to your installation, fits directly into 3/4" NPT tank opening. Mounts vertically or horizontally. (For horizontal mounting, just remove end cap from agitator. The full flow is then directed across the tank.) The overlapping 4-port side outlet provides full 360° agitation for thorough mixing in the vertical position. Molded polypropylene construction provides rigidity and strength. Choice of four nozzles assures proper agitation for your spraying.

ASSEMBLY INSTRUCTIONS

1. Agitator is packaged for shipment disassembled in a see-through plastic envelope. Select your nozzle size and assemble as shown on the sectional drawing. Insert small diameter of nozzle into tank adapter. Thread parts together in order shown. Note that body section end with vertical slots screws into tank adapter (other end is for cap).
2. Wrap teflon tape on the inside 3/4" NPT thread on agitator before installing to tank. This assures a tight seal and will prevent agitator from loosening because of vibration.
3. Apply teflon tape on the outside 3/4" NPT thread for agitator line and install a metal coupling. This will assure a tight seal and prevent breakage of agitator.

SELECTING THE PROPER NOZZLE FOR SPRAY TANK AGITATION

The right nozzle is the one which provides ample agitation to keep the wettable powders in suspension, but not too much as to cause foaming of spray material.

PERFORMANCE TABLE MODEL 3371-0019

Nozzle Diameter	Input to Agitator in GPM	Input to Agitator in L/min.	Agitator Pressure in PSI	Agitator Pressure in KPa	Agitator Output in GPM	Agitator Output in L/min.

NOTE: When ordering parts, give QUANTITY, PART NUMBER, DESCRIPTION, and COMPLETE MODEL NUMBER. Reference numbers are used ONLY to identify parts in the drawing and are NOT to be used as order numbers.

Parts Kit No. 3430-0178
 Contains: One each ball bearing (Ref. 14), motor shaft seal (Ref. 16), thread seal gasket (Ref. 32), and washer (Ref. 33), two each motor housing o-rings (Ref. 25), and port adapter o-rings (Ref. 37).

Repair Parts Kit No. 3430-0332
 Contains: One mechanical seal (Ref. 5), one o-ring (Ref. 6) and one rubber gasket (Ref. 45).

Silicon Seal Kit No. 3430-0475
 Contains one each: 1700-0100 gasket (Ref. 45), 1720-0083 o-ring (Ref. 6) and 2120-0032 seal (silicon carbide) (Ref. 5).

Hydraulic Motor Part #s
 2500-0009C (HM1C Models)
 2500-0010C (HM2C Models)
 2500-0011C (HM3C Models)
 2500-0012C (HM4C Models)
 2500-0018C (HM5C Models)
 2500-0033 (CTGM1 Models)

Adapter Kit No. 3430-0187 (HM4 Models Only):
 Includes one each Ref. 37, Ref. 42, and Ref. 44, three Ref. 43, three metering orifices one No. 3373-0020 (Size #1), one No. 3373-0021 (Size #2) and one No. 3373-0022 (Size #3).

Ensemble de contrôles électriques • Electrical switch boxes assembly **MP-46625...**

Ajouter le préfixe "MP" avant le # de pièce, ex : MP-V2B26G
 Add the "MP" prefix before the part #, ex : MP-V2B26G

**ELECTRICAL SWITCH BOX
BOÎTE DE COMMANDES ÉLECTRIQUES**

Cod. 466520 - 466521

Cod. 466530 - 466531

Cod. 466550 - 466551

MISURE D'INGOMBRO - SIZES

FRANÇAIS**CABLAGE**

- Raccordez le fil marron du câble d'alimentation (A) à un point du circuit ayant une tension de 12V, si possible en aval de l'interrupteur à clé, qui est en mesure de débiter un courant d'au moins 8 A.
- Raccordez le fil bleu du câble d'alimentation au châssis; assurez-vous que le point d'ancrage choisi ait une bonne continuité électrique avec le pôle négatif de la batterie.
- Effectuez toutes les connexions comme indiqué dans la figure, en utilisant des bômes à vis ou des cosses; vérifiez que les raccordements sont stables pour éviter que les vibrations provoquent de faux contacts.
- Protégez les connexions entre le câble de la boîte de commande et les fils des électrovannes par un boîtier de dérivation (code 466010, comprenant aussi les bômes et les serre-câbles).
- Enduisez le filet du manomètre, sortant à l'arrière du boîtier, d'une mince couche de colle en faisant attention à ne pas boucher l'orifice d'entrée du manomètre
- Vissez la réduction (F) sur le filet du manomètre
- Vissez le raccord rapide fileté 1/8" (E) sur la réduction
- Vissez le raccord rapide 1/4" (C) à l'endroit où vous désirez, contrôler la pression
- Introduisez le, tuyau (D) dans les deux raccords
- Coupez le tuyau à la bonne distance et introduisez le joint (B)

**ENTRETIEN****REPLACEMENT DU MANOMETRE**

- Débranchez le tube de liaison du manomètre (D) du raccord à branchement rapide 1/8" (E) en maintenant appuyé l'anneau de ce dernier.
- Dévissez la réduction (F) du filet du manomètre.
- Appuyez et simultanément tournez l'anneau de fixation (L) de 90° dans le sens renverse aux aiguilles d'une montre.
- Enlevez le manomètre en appuyant sur le raccord arrière.
- Otez le joint (I) placé dans la partie arrière du manomètre démonté et montez-le sur le manomètre neuf.
- Introduisez le manomètre neuf dans le boîtier
- Introduisez l'anneau de fixation, appuyez et simultanément tournez de 90° dans le sens des aiguilles d'une montre pour le fixer.
- Revissez la réduction sur le filet du manomètre en utilisant de la colle et en faisant attention à ne pas boucher l'orifice d'entrée du manomètre.

REPLACEMENT DU FUSIBLE

- Enlevez le capuchon du fusible (G)
- Enlevez le fusible (H)
- Introduisez le fusible neuf en exerçant une légère pression, jusqu'à ce qu'il arrive en fin de course
- Remettez le capuchon du fusible

REPLACEMENT D'UN OU DE PLUSIEURS INTERRUPTEURS

- Enlevez le capuchon du fusible (G)
- Découvrez les connecteurs en faisant glisser les capuchons des 2 câbles de liaison
- Débranchez les câbles en maintenant les ailettes d'ancrage enfoncées.
- Dévissez les 4 vis de fixation (O) qui se trouvent sur la partie arrière du boîtier
- Dévissez les écrous de tous les interrupteurs et enlevez le circuit (N)
- Enlevez les interrupteurs en tenant le circuit.
- Montez les nouveaux interrupteurs en appuyant sur le fillet mais pas sur les leviers d'actionnement.
- Remontez tout en suivant la procédure inverse

MODIFICATION DU TYPE DE FONCTIONNEMENT DU BOITIER DES COMMANDES

Le boîtier électrique a deux types de fonctionnement:

- **Type M (standard):** quand l'interrupteur de la vanne générale est commuté en position OFF, la soupape d'échappement est actionnée et automatiquement toutes les sections sont fermées, tandis que sur la position ON, chaque section est fermée ou ouverte suivant la position des interrupteurs correspondants.
- **Type P (sur demande):** chaque section est indépendante de la position de l'interrupteur général qui actionne seulement la vanne générale.

Pour changer le fonctionnement du Type M au Type P:

- enlevez le capuchon du fusible (G)
- découvrez les connecteurs en faisant glisser les capuchons des 2 câbles de liaison
- débranchez les câbles en maintenant les ailettes d'ancrage enfoncées
- dévissez les 4 vis de fixation (O) qui se trouvent à l'arrière du boîtier
- déplacez le câble, repéré sur le circuit par le chiffre 1, de la position M1 à la position P1
- déplacez le câble, repéré sur le circuit par le chiffre 2, de la position M2 à la position P2
- remontez l'ensemble en suivant la procédure inverse

INCONVENIENTS ET REMEDES

INCONVENIENT	CAUSE	REMEDE
Les leds s'allument mais les motoréducteurs ne fonctionnent pas	Fils débranchés	Contrôlez les raccordements électriques
Les leds sont éteints et les motoréducteurs ne fonctionnent pas	Fusible brûlé Pas d'alimentation	Contrôlez le fusible (H) Contrôlez l'alimentation
Quand les interrupteurs sont sur la position OFF les leds sont allumés	Fils d'alimentation inversés	Contrôlez le raccordement des fils d'alimentation
Fuite d'eau entre réduction (F) et le fillet	La réduction n'est pas vissée correctement ou sans colle	Vissez de nouveau réduction en utilisant de la colle.
Le manomètre indique toujours une pression 0	L'orifice d'entrée du manomètre est bouché par de la colle. Manomètre défectueux	Contrôlez l'orifice d'entrée du manomètre et nettoyez-le Vérifiez le manomètre

ENGLISH

CONNECTION

- Connect the power cord's brown wire (A) to a 12 V power outlet possibly downstream from the keylock switch and able to supply current at 8 A minimum
- connect the power cord's blue wire to the chassis making sure that the fastening point chosen has excellent electric continuity with the battery's negative pole
- make all the connections as shown the Figure using the screw or terminal end terminals. Ensure that the connections are securely tightened to avoid false contacts caused by vibration
- protect the connections between the control box cable and the electrovalves wires with a junction box (Ordering code N° 466010 including terminals and wire pass throughs)
- cover the gauge's threaded section (rear side) with a light coating of sealant but be careful not to clog the gauge inlet hole
- screw the reduction fitting (F) onto the gauge's threaded section
- screw the 1/8" threaded quick coupling (E) onto the reduction fitting
- screw the 1/4" threaded quick coupling (C) at the point where you want to check the pressure
- insert the hose (D) into the two fittings
- cut this hose at the correct place and insert the coupling (B)

* Non connected in the 2-way version

REPAIR INSTRUCTIONS

CHANGING THE GAUGE

- Remove the gauge connecting pipe (D) from the 1/8" threaded quick coupling (E). Hold down the release button on this latter
- unscrew the reduction section (F) from the gauge's threaded section
- press down on and, at the same time, turn the fastening ring (L) 90° counter clockwise
- remove the gauge itself by pushing down on the rear coupling
- remove the gasket (I) at the back of the gauge you have just removed and push it on the new gauge
- Insert the new gauge in the box
- insert the fixing ring; push it down and at the same time turn it 90° clockwise to fasten the gauge
- screw the reduction back on the gauge's threaded section with a light coating of sealant and make sure the hole is not clogged

CHANGING THE FUSE

- Remove the fuse cap (G)
- remove the blown fuse (H)
- insert the new fuse and push gently down on it until it is all the way in
- replace the fuse cap

CHANGING ONE OR MORE SWITCHES

- Remove the fuse cap (G)
- uncover the connectors by pulling back the caps from the two connecting wires
- remove the wires by pinching back the fastening fins
- remove the 4 fastening screws (O) at the rear of the electric box
- remove the nuts from all the switches and remove the circuit board (N)
- hold the circuit board steady and remove the switches
- insert the new switches by pushing on the threaded section and not on the actuating levers
- re-assemble in reverse order

CHANGING CONTROL BOX OPERATING MODE

The electric control box has two kinds of operation:

Type M (standard): when the main switch is moved to OFF, any drain valves are actuated and all the sections are automatically closed. When the switch is on ON, the individual sections are open or closed depending on the positions of their switches

Type P (optional): the position of the individual sections is independent from that of the master switch which is therefore just the main switch

To change the operational mode from Type M to Type P:

- remove the fuse cap (G)
- uncover the connectors by pulling back the caps from the two connecting wires
- remove the wires by pinching back the fastening fins
- remove the 4 fastening screws (O) at the rear of the electric box
- move wire marked 1 on the circuit board from position M1 to P1
- move wire marked 2 on the circuit board from position M2 to P2
- re-assemble in reverse order

TROUBLE SHOOTING

<u>PROBLEM</u>	<u>TYPICAL CAUSE</u>	<u>REMEDY</u>
The LEDs light but geared motors do not run	Wires disconnected	Check electric connections
LEDs are out and geared motors do not run	Fuse (H) blown No power supply	Check fuse Check power supply
When switches are OFF the LEDs are lit	Supply wires switched around	Check power supply wires
Water leaks between reduction (F) and gauge threaded section	Reduction incorrectly screwed in or without sealant	Screw reduction in correctly using sealant
The gauge always reads a pressure of "0"	Gauge inlet hole is clogged by the sealant Defective gauge	Check inlet hole and clean it Check gauge

Ce régulateur raccordé au sélecteur 17Y permet d'augmenter ou de réduire la pression du système en tournant la poignée sur le dessus du régulateur. Avec une pompe centrifuge, ce régulateur est remplacé par une valve à billes.

This regulator hooked-up with the 17Y selector allows the operator to increase or decrease the pressure by turning the handle on this regulator. This is replaced by a ball-valve on centrifugal pump.

Vanne régulatrice de pression manuelle • Manual pressure relief valve MP-463080

When servicing Valve :

Replace valve body with iso-body kit (item 10) if valve has been leaking internally.

Replace motor assembly if the motor will not run.

Before reassembling valve, remove the coupler shaft from the valve body. Apply Loctite (item 12) to coupler shaft and woodruff key (tem 4) onto the motor shaft. Plug motor into the valve connector coming from Sprayer Control Console. Check that the motor rotates in both directions. Motor must stop when coupler shaft CAM releases printed circuit board button.

When reassembling valve, grease both sealing surfaces of coupler shaft. Insert coupler shaft into iso-flange and be sure seal properly seats on shaft. Install motor on valve body and apply silicon sealant to mounting holes. Reassemble remaining items as shown in parts diagram.

Ensemble de supports de buses multiples / Multiple nozzle bodies & assemblies

360 Nozzle Body Series for Wet or Dry Booms

- Disponible avec 3, 4 ou 5 positions de pulvérisation pour changement rapide de buse ou vidange de la rampe.
- Fermeture complète entre chaque position de pulvérisation.
- Pression maximale d'opération de 300 lb/po².
- Disponible avec des corps de buse (boyau) de 20mm, 1/2, 3/4 ou 1 po.
- Valve anti-retour ChemSaver® incluse pour fermeture sans gouttage.
- Membrane EPDM standard et membrane en viton disponible en option.
- Available with either 3, 4 or 5 spray positions for easy change of spray tips or quick boom flushing.
- Positive shut-off between each spray position.
- Maximum operating pressure of 300 psi.
- Available in 1/2", 3/4" or 1" single or double hose shanks.
- Includes ChemSaver® diaphragm check valve for drip-free shutoff.
- Standard EPDM diaphragm with Viton available as an option.

JB-5500

Le corps de la buse cannelé tourne d'un demi-tour pour permettre le passage de l'atomisation avec jet conique grand angle à un jet rectiligne. Les positions "A" et "B" de la buse sont les deux points extrêmes de rotation pour le réglage de la buse. D'autres tailles sont également disponibles.

Knurled body of tip rotates through a half turn to provide spray selection from wide angle, finely atomized cone spray to a straight stream spray. Tip settings "A" and "B" represent two extreme points of rotation in tip adjustment. Other sizes available.

For Capacities from 0.017 to 1.9 GPM

JB-5500-PP

La buse orientable ConeJet JB-5500 est disponible également en polypropylène. La buse en polypropylène a les mêmes caractéristiques que la buse en laiton et est très résistante aux produits chimiques. Son faible poids convient pour l'emploi sur des pulvérisateurs manuels à dos.

The JB-5500 Adjustable ConeJet tip is also available in a polypropylene version. The polypropylene tip has the same performance characteristics as the brass tip and provides excellent chemical resistance. This tip's light weight makes it well-suited for use on hand held and backpack type sprayers.

TIP SETTING "B"
STRAIGHT STREAM SPRAY PATTERN

TeeJet® Off-Center Flat Spray Tips — Smaller Capacities

TeeJet Off-Center spray tips are commonly installed in double and single swivel nozzle bodies. Because these bodies are adjustable for angular position, a wide spray swath is easily obtained.

See page 59 for swivels and hose drops.

How to order:
Specify tip number and material.
Example: OC-02 Brass

Tip	Capacity One Nozzle IN l/min	HEIGHT = 45 cm							HEIGHT = 60 cm
