

From the Enthusiast to the Professional the F70 has many great features. Use it for coin shooting, relic hunting, gold prospecting, and much more!

F70

- Detects coins to 12" +.
- 13 kHz frequency– good for coin shooting, relic hunting, and gold prospecting.
- Frequency shift for eliminating electrical interference and crosstalk.
- Advanced software-based motion discrimination with notch for searching trashy areas.
- All metals auto-tune mode for deep-searching in non-trashy areas.
- Visual target ID by category & 0-99 indication, both discrimination & auto-tune modes.
- Target ID confidence bar graph.
- High-resolution push-button ground balance with ground balance readout.
- Ground balance range goes all the way to salt.
- Continuous display of ground mineral concentration.
- Push-button static pinpoint with variable audio pitch and visual depth reading.
- Independent sensitivity and threshold settings provide fine control over response.
- Speed selection– normal for most situations, slow for deep coins in non-trashy areas.
- Batteries under the elbow provide counterweight – ergonomic design.
- Battery life on 4 alkaline AA batteries, 40 hours.
- Switch back and forth between two programs; saves both programs when turned off.
- Standard 10 inch elliptical concentric open-center searchcoil.
