

Do you have the correct sizes?

It is important to ensure you have the correct sizes of decks, and cross braces for your frames. Use the following info graphic to understand the coalition between sizes of decks, braces, and frames.

Deck length will be determined by how far apart you want your scaffold. **Cross Braces** height will be determined by the space between the pins Ex. Half frames the pins are 2ft apart and on larger frames most are 4ft apart.

Deck width will be determined by the number of decks you require on your platform and by the maximum width of the frames. Ex. three 19" wide decks will also fit a 5'x5' frame, as will two 24" wide decks.
