1. Installation

You can install an eSIM using the following methods:

1. Copy and paste the activation code we sent to your email.
2. Scan the QR code in the email to install. If you prefer to use the scanning method, you'll need to either print the QR code or open it on another device for your phone to scan.

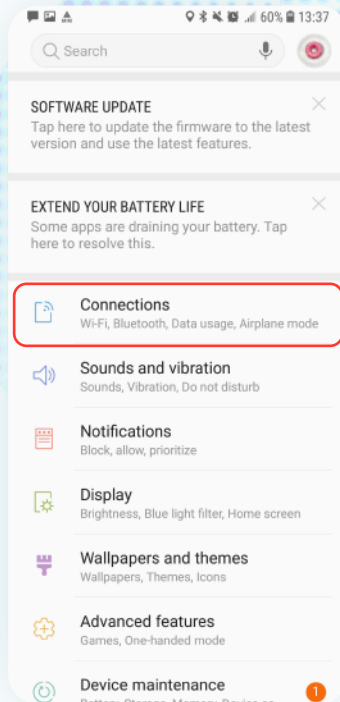

We recommend that you complete the eSIM installation before depar-

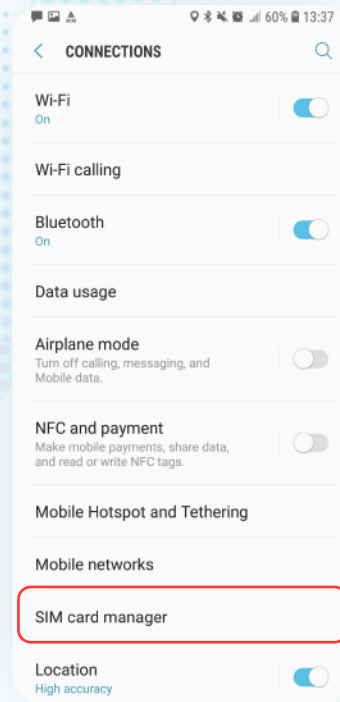

1.1 Manual installation

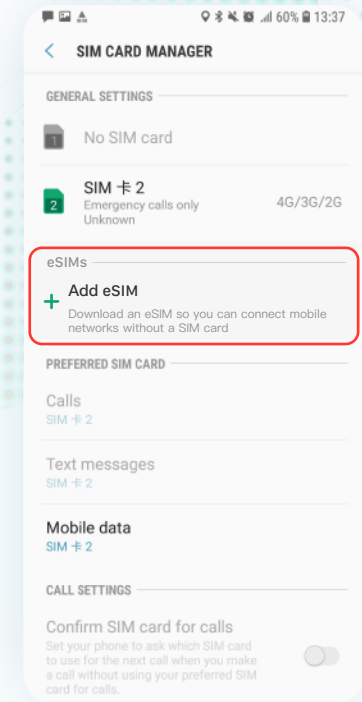

1. Tap "Settings"

2. Tap "Connection"

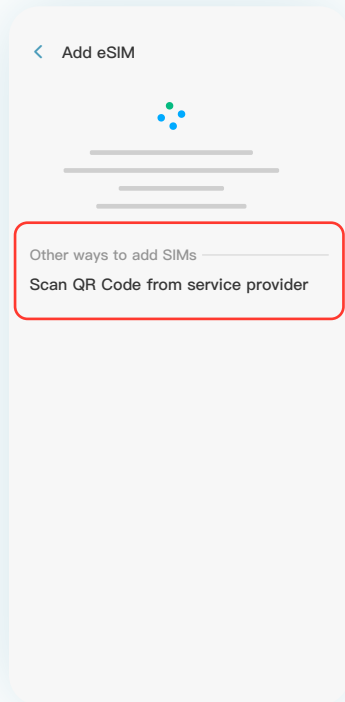

3. Tap "SIM card manager"

4. Tap "Add eSIM"

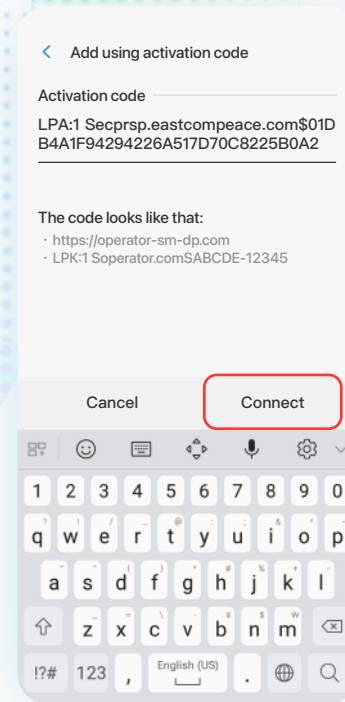

1.1 Manual installation

4.1 FAQ

Can I install eSIM in an environment without internet access?

Installing eSIM must be done in an environment with internet access. You can complete certain settings on your phone using Wi-Fi or mobile data. Therefore, we strongly recommend that you complete the installation before departure.

Can I activate eSIM without an internet connection?

You don't need to connect to any network to activate your eSIM, as enabling roaming will activate the network service. We recommend that you activate your plan upon reaching your destination to avoid early data consumption.

Why do I need internet access to use the eSIM installation application?

Because the application needs to verify data provided by third parties, and you need to know how much data your plan is consuming.
