

BRYCE AND ZION COLLECTIONS

The airy weave of these products makes for a looser construction which can cause skewing to occur. This creates an inconsistency in the stripe and may require jumping ribs to make rugs square. Variations in weave are common for these two collections.

Seaming indoor/outdoor rugs can be visible. Bryce and Zion are not recommended for seaming. All seams are made at the discretion of the purchaser.

Communicating the characteristics of these indoor/outdoor collections will help ensure customer satisfaction with every floor covering.
