

SISAL WALLCOVERING CARE & CLEANING INFORMATION

GENERAL CARE

The best care you can give your natural fiber wallcovering is regular, thorough vacuuming. For best results, vacuum from different directions, making several passes over the area. Heaviest traffic areas require the most attention and should receive regular vacuuming to reduce soil build-up and prolong the beauty and life of the wallcovering.

CLEANING YOUR WALLCOVERING

- NEVER saturate your wallcovering with water or cleaner, this will stain it. Any method that involves saturation with water, such as steam cleaning, hot water extraction or wet shampooing should NOT be used. These methods can cause shrinkage, dimensional changes, and staining of natural fibers.
- WHEN liquid spills occur, blot up (do not rub) immediately with a clean, dry, undyed cloth. If the spilled material is solid, scrape up what you can with a dull edge spatula.
- DRY EXTRACTION methods of cleaning spills and stains are recommended, such as the Host® Dry Carpet Cleaning System or similar. For information on the Host® Dry Carpet Cleaning System visit www.hostcarpetcleaning.com.
- ALWAYS test the cleaning method to insure that color is not affected. Test in a small, concealed area first.

THESE CARE AND CLEANING RECOMMENDATIONS PROVIDE PRACTICAL GUIDELINES FOR KEEPING YOUR WALLCOVERING LOOKING ITS BEST. HOWEVER RESPONSIBILITY FOR CLEANING AND MAINTAINING LIES WITH THOSE WHO PERFORM THE TASK.
