

CUSTOMER INFORMATION - BOTANICAL BLENDS COLLECTION

Seagrass is the grass of a tropical reed, grown in paddy-like fields. Fibers are harvested by hand, dried and spun into tough strands. When woven together, the result is a carpet that is full of texture, yet hardy and durable.

Factors such as environmental changes, construction and pollution have caused crop conditions to diminish over the years, resulting in a change of overall seagrass quality. Seagrass carpet that was smoother in appearance may now contain more knots. Tie-offs and sprouting, are common because of its manufacturing process. Due to the change in raw material, uneven thickness of seagrass ropes may result in more latex bleeding onto the face of the product. Seagrass is undyed and blends nature's own colors - beige, green, yellow and russet - in endless variations, resulting in natural beauty with striations and hue changes between rolls and rugs.

Although Botanical Blends is experiencing changes, these variances are normal. Understanding and communicating the characteristics of this natural product will enhance the satisfaction and value to your customer. Inherent natural irregularities add charm. Variation in texture and color create a distinctive, interesting character unique to every order. Please inspect material and make note of these changes before installation.

CUSTOMER INFORMATION - BOTANICAL BLENDS COLLECTION

Fibreworks Seagrass is superior to other products in the market due to its premium latex backing. Seagrass with premium latex is a quality driven product. The increased weight will help to maintain dimensional stability, which is beneficial in all bordered area rug applications and broadloom installations that require additional handling.

Standard Latex is light weight, with minimal dimensional stability and will pull apart.

Premium Latex is high quality and holds dimensional stability.

Also please take notice of a few patterns below and how they are differentiated based on their unique characteristics.

Summer Lace 631 has a slightly greener hue in the weft of the product. Autumn Twist 616 tends to have a more rustic aesthetic due to the way the fiber is twisted. Spring Twine 606 has a smoother twist for a more refined appearance. Autumn Twist 616 and Spring Twine 606 colors may vary from a green to brown hues due to the time of harvest.
